Complete Customer Guide

Run your business from one friendly workspace

- Installation for Windows, macOS, Android, Chrome and iPhone Simulator
- Planner, CRM, sales, stock, reports, Work Tracker and tools
- Google Drive sync, backups, restore, export and troubleshooting

Follow the pages in order for first-time setup, or jump directly to a feature.

WHAT TO DO

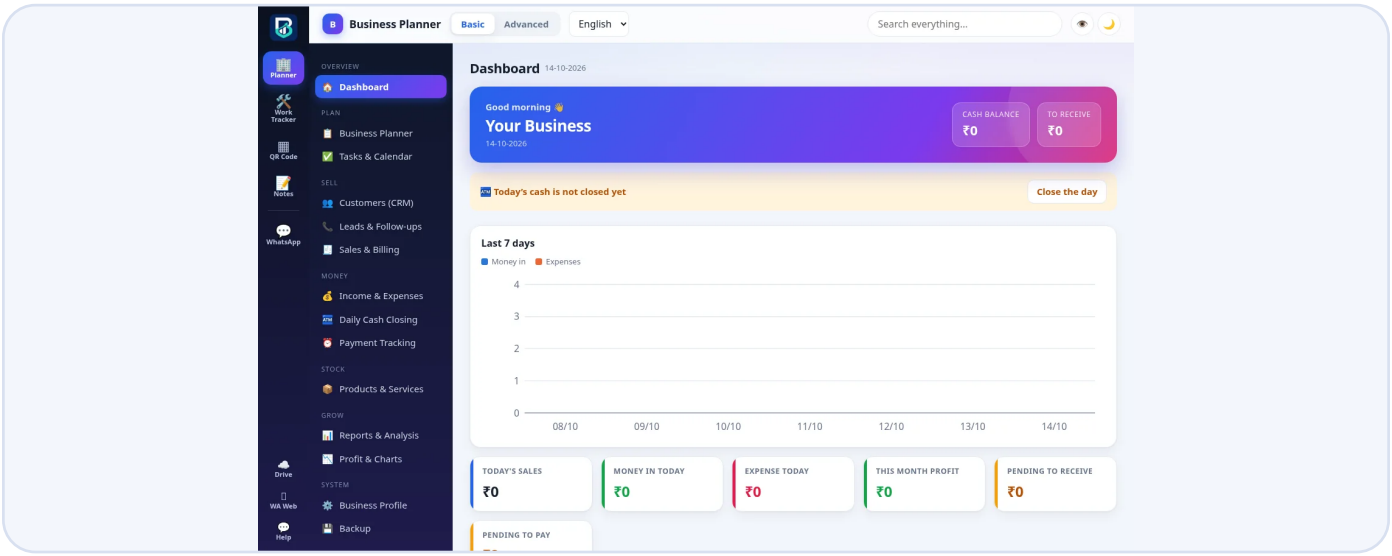

1. Pages 4–11: choose a platform, install, launch and activate.
2. Pages 12–45: learn the dashboard and everyday business tools.
3. Pages 46–49: connect Drive, protect data and export files.
4. Page 50: solve common problems and complete the final checklist.

TIP

Keep this PDF available on every device used for Business Suite.

What Business Suite includes

A single workspace connects planning, customers, money, work and daily follow-up.

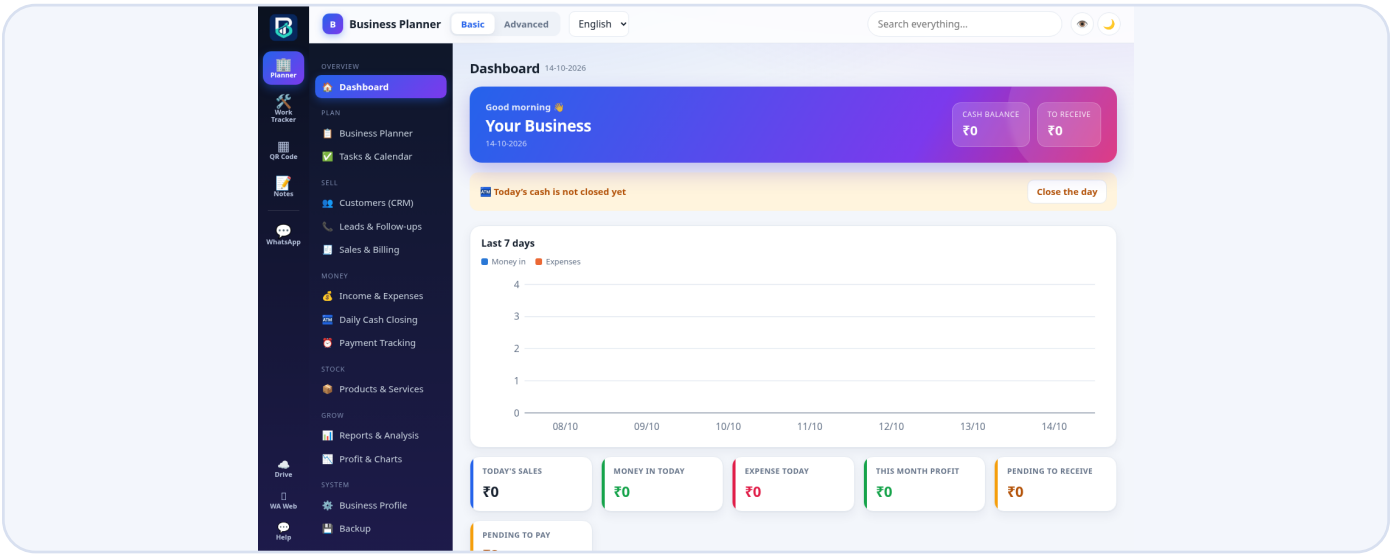

WHAT TO DO

1. Planner: goals, tasks, CRM, leads, quotations, billing, payments, stock and reports.
2. Work Tracker: customers, jobs, orders, services, reminders, files and payment activity.
3. Utilities: QR Code, Notes, WhatsApp preparation, Drive sync, backup and restore.
4. Local-first operation keeps core records available even when the internet is interrupted.

TIP

Use the Basic view first; open Advanced tools as your workflow grows.

Use the same Business Suite workflow across supported devices.

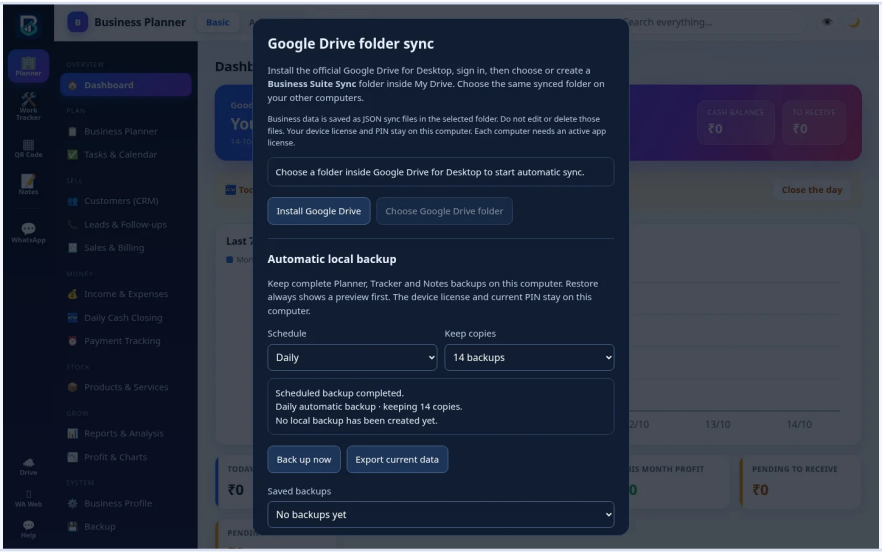

WHAT TO DO

1. Windows: 64-bit desktop installer.
2. macOS: Intel and Apple Silicon packages where supplied.
3. Android: ARM64 APK installed from the authorised download source.
4. Chrome: install the published extension from the Chrome Web Store.
5. iPhone: the current package is for Xcode Simulator on a Mac; it is not a physical-iPhone App Store build.

CHECK

Confirm the package name and source before installing.

A short preparation prevents most installation and data problems.

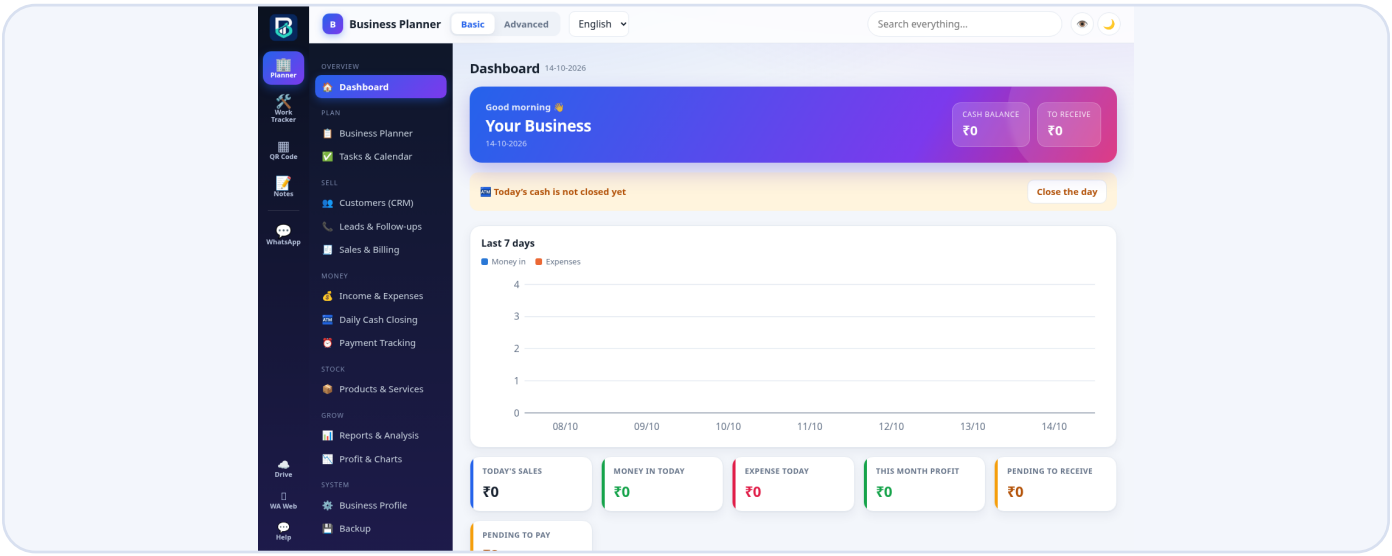

WHAT TO DO

1. Download only from the official Business Suite link provided by the seller.
2. If updating an existing installation, create a current JSON or encrypted backup first.
3. Keep enough free disk space and finish pending system updates.
4. Have your licence details ready. Internet is required for licence verification and cloud features.
5. Do not uninstall an older mobile build until its data is backed up.

CHECK

A backup is especially important when Android reports a signature conflict.

Extract the download before running the installer.

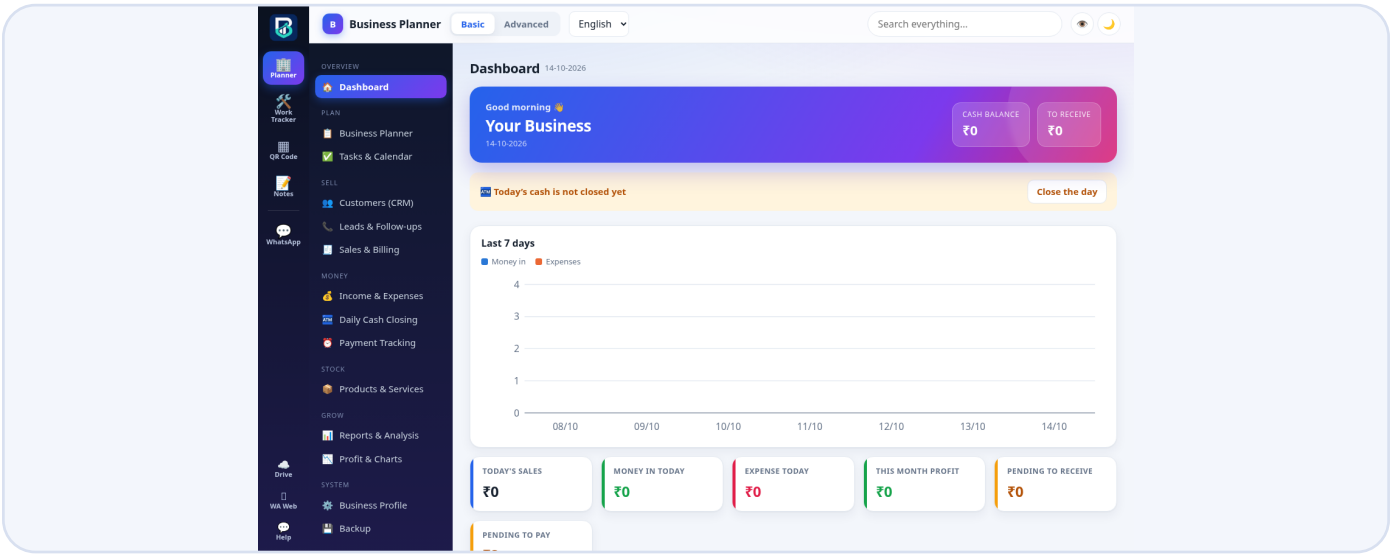

WHAT TO DO

1. Download the Windows ZIP and choose Extract all.
2. Open the extracted folder and run the setup .exe file.
3. If SmartScreen appears, select More info, verify the package, then Run anyway.
4. Complete setup and launch Business Suite.
5. Activate, open Planner and Work Tracker, then create a test backup.

TIP

Running the installer from inside the ZIP can cause an incomplete installation.

Move Business Suite into Applications before first use.

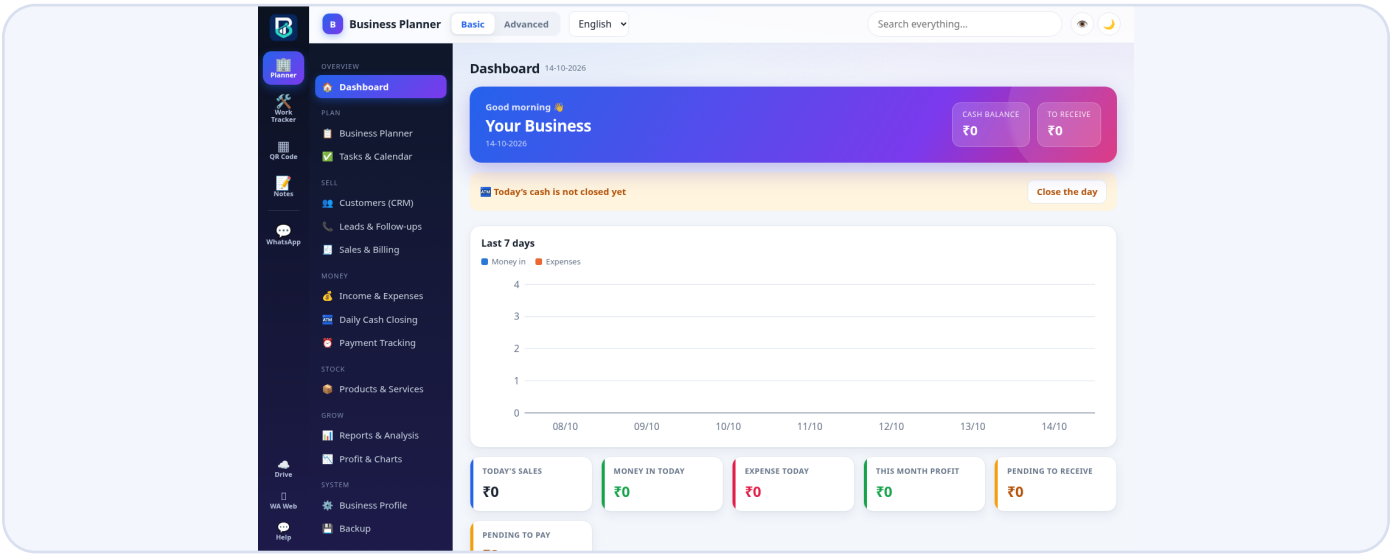

WHAT TO DO

1. Extract the downloaded ZIP and open the supplied DMG.
2. Drag Business Suite to the Applications folder.
3. In Applications, Control-click the app and choose Open.
4. If blocked, open System Settings → Privacy & Security → Open Anyway.
5. Activate and confirm that Planner, export and backup open correctly.

TIP

Use the package intended for your Intel or Apple Silicon Mac.

Allow installation only for the app that opened the APK.

WHAT TO DO

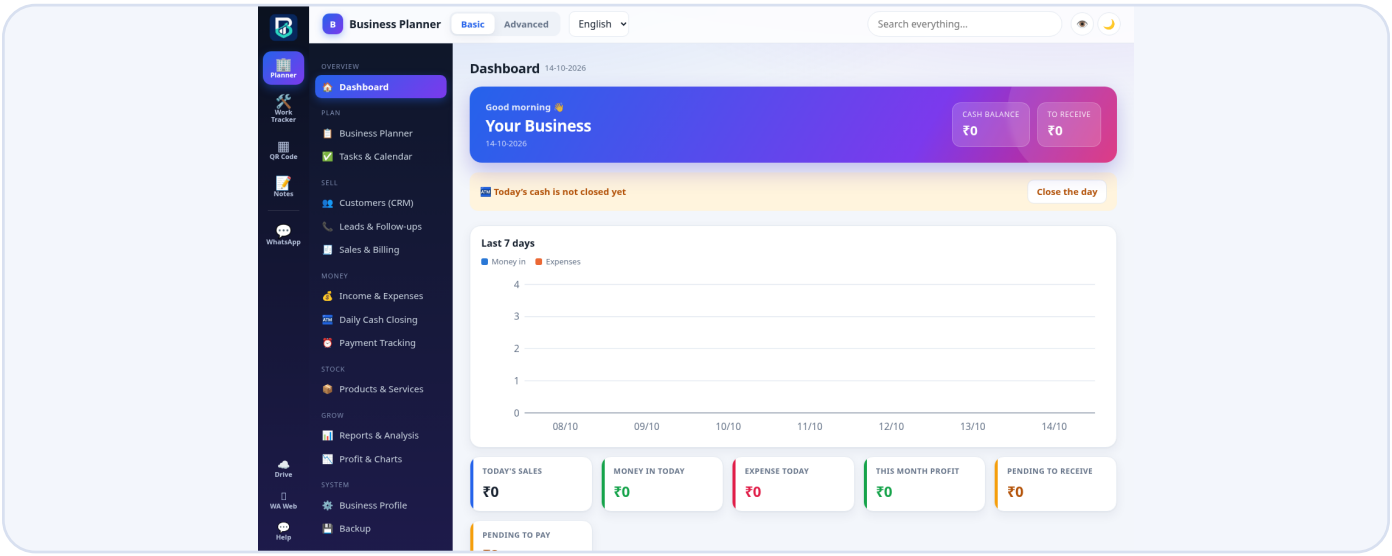

1. Extract the Android ZIP and tap the Business Suite APK.
2. When prompted, allow Install unknown apps for your browser or file manager.
3. Install and open Business Suite.
4. Activate, test the dashboard and create a backup.
5. Return to Android settings and disable Install unknown apps for that source.

CHECK

If Android says App not installed, back up the old app before resolving a signature conflict.

Use the current iPhone Simulator build

This workflow requires a Mac with a current version of Xcode.

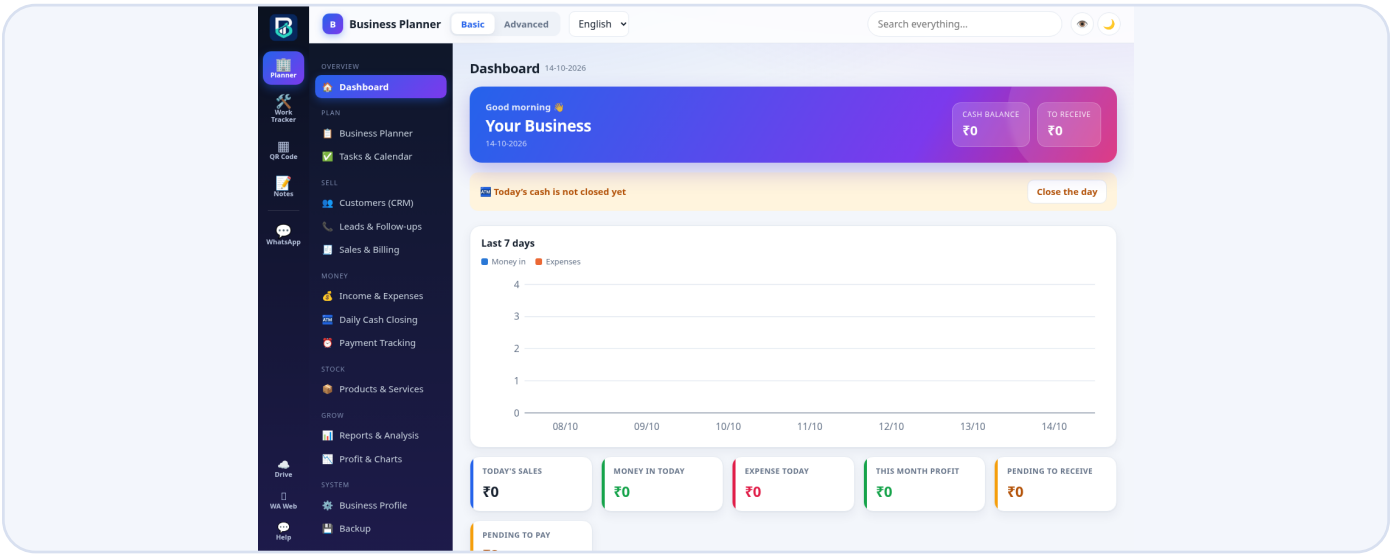

WHAT TO DO

1. Install Xcode and open an iPhone Simulator.
2. Extract the supplied Business Suite simulator package.
3. Drag Business Suite.app onto the running Simulator.
4. Launch it from the Simulator home screen and complete setup.
5. Back up data before resetting or erasing the Simulator.

CHECK

The current package does not install on a physical iPhone.

The Chrome Web Store version gives every customer a stable extension ID.

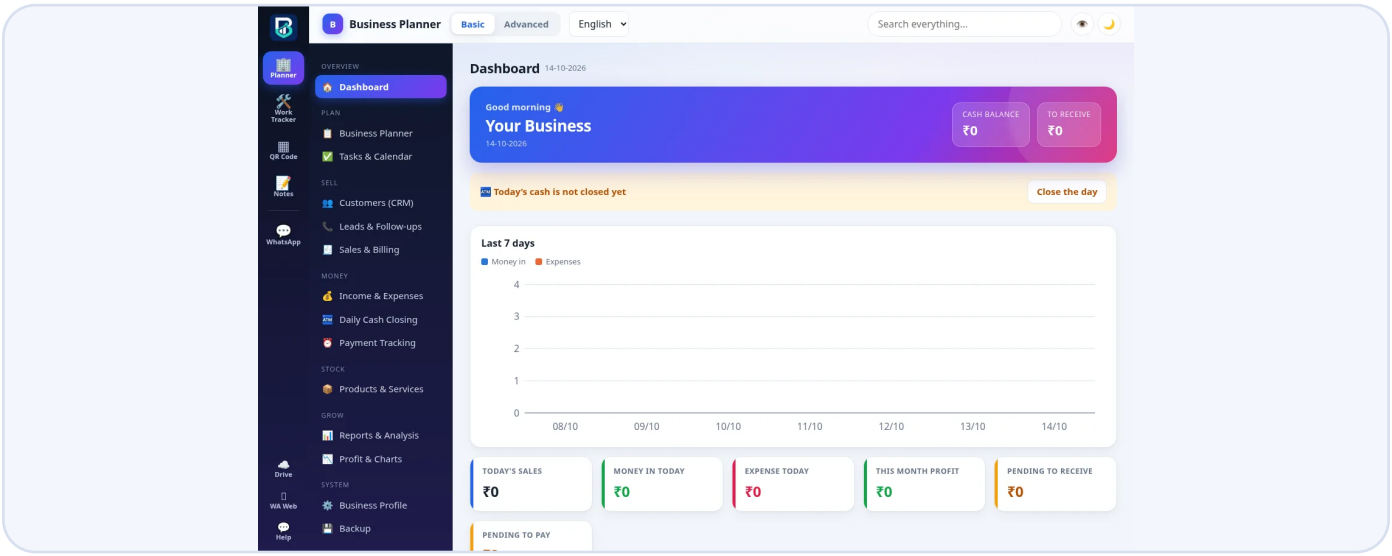

WHAT TO DO

1. Open the official Business Suite listing in the Chrome Web Store.
2. Select Add to Chrome, review permissions and confirm.
3. Pin Business Suite from Chrome's Extensions menu.
4. Open it, activate the licence and test the Planner.
5. Avoid Load unpacked for customer use; it is intended for development testing.

TIP

Store installation is required for consistent Google sign-in across customer computers.

The trial lets you verify the workflow before choosing a plan.

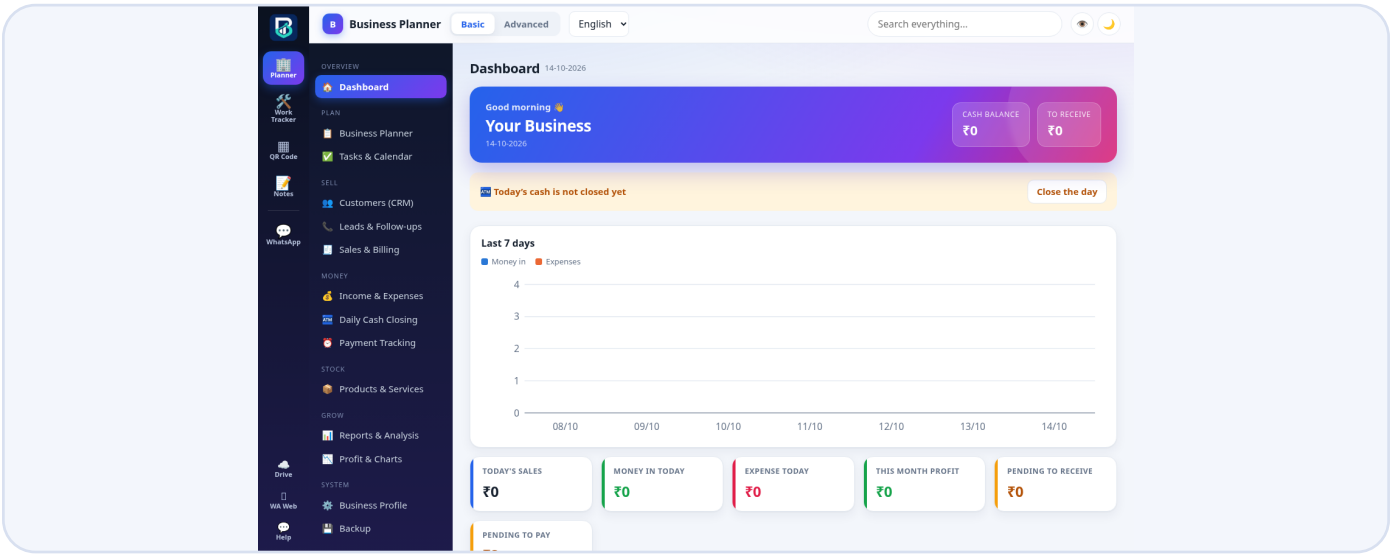

WHAT TO DO

1. Read the remaining trial time shown at the top of the dashboard.
2. Select View plans when you are ready to activate or extend access.
3. Enter the licence details supplied by the authorised seller.
4. A licence applies according to its plan and device rules; reinstalling should not be treated as a new trial.
5. Keep the licence PIN private and contact support if it is forgotten.

TIP

Internet is needed for verification; core saved records remain local-first.

The main navigation keeps the most-used areas one tap away.

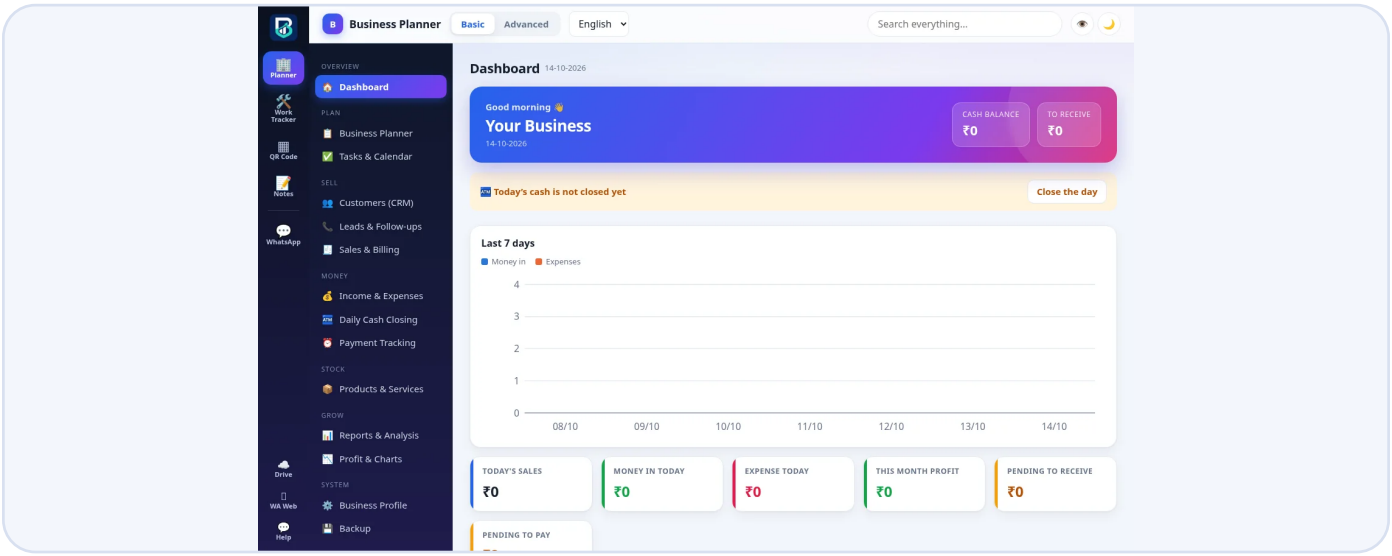

WHAT TO DO

1. Planner opens business planning, CRM, sales, money, stock and reporting tools.
2. Work Tracker manages operational jobs, orders, service and follow-up.
3. QR Code creates shareable codes; Notes stores organised business notes.
4. WhatsApp prepares messages and summaries; Drive manages cloud sync and restore.
5. On smaller screens, use the bottom navigation and scroll within the selected section.

TIP

Start from Planner when you are unsure where a record belongs.

The dashboard is designed for quick scanning and fast entry.

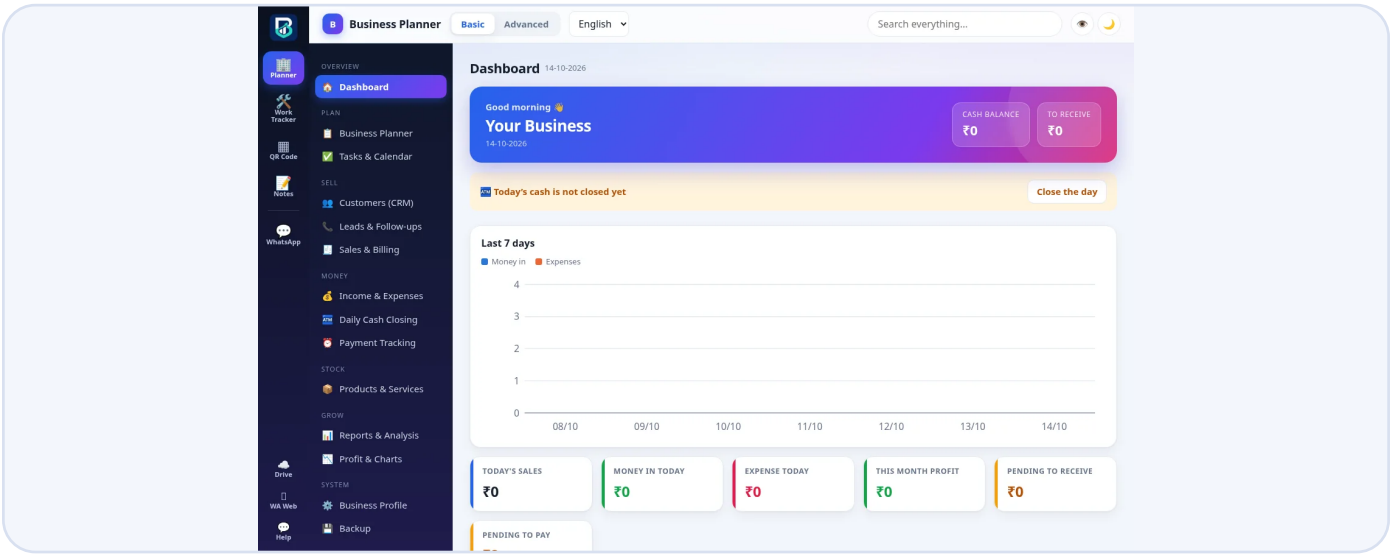

WHAT TO DO

1. The top bar shows trial or licence status and access to plans.
2. Basic and Advanced control how many tools are visible.
3. Search finds records and actions across the workspace.
4. Cards group related work such as planning, customers, money and reports.
5. The bottom or side navigation moves between major modules without closing the app.

TIP

A clean dashboard reduces missed follow-ups and repeated data entry.

Choose the amount of detail that fits the user.

WHAT TO DO

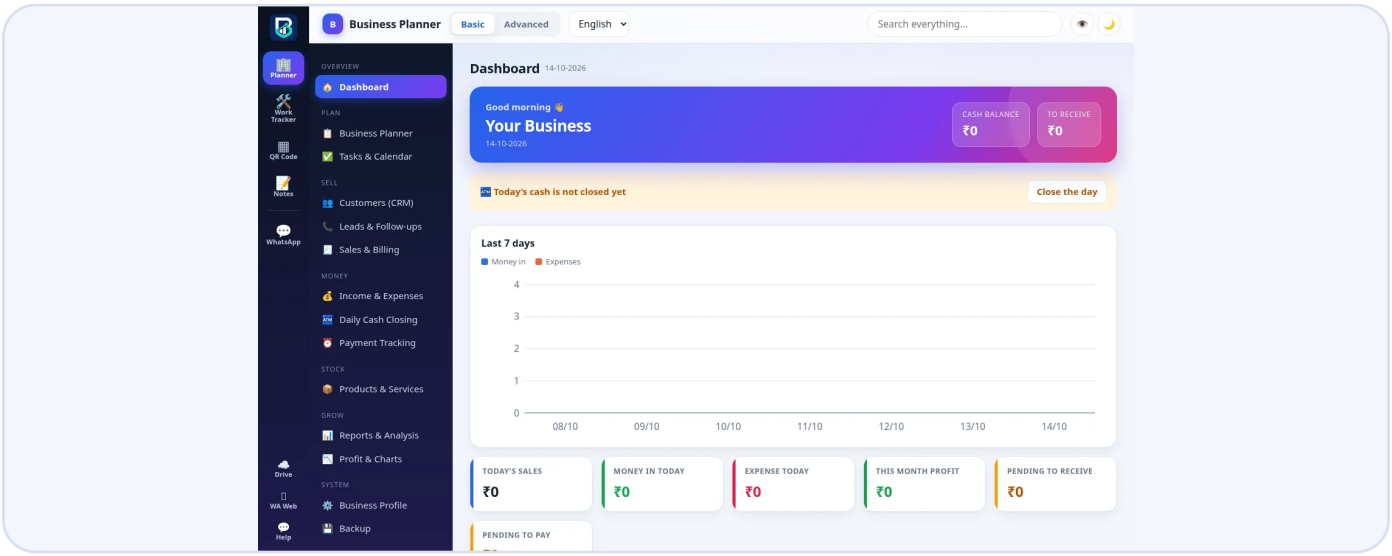

1. Basic mode shows essential daily tools and is best for new users.
2. Advanced mode reveals deeper planning, reporting and operational sections.
3. Switching modes changes visibility; it does not delete records.
4. Train staff in Basic first, then enable Advanced tools needed for their role.
5. Use search when a feature is not immediately visible.

TIP

Mode changes are safe because your saved business records remain available.

Set up your business profile

Complete your identity before creating customer-facing documents.

WHAT TO DO

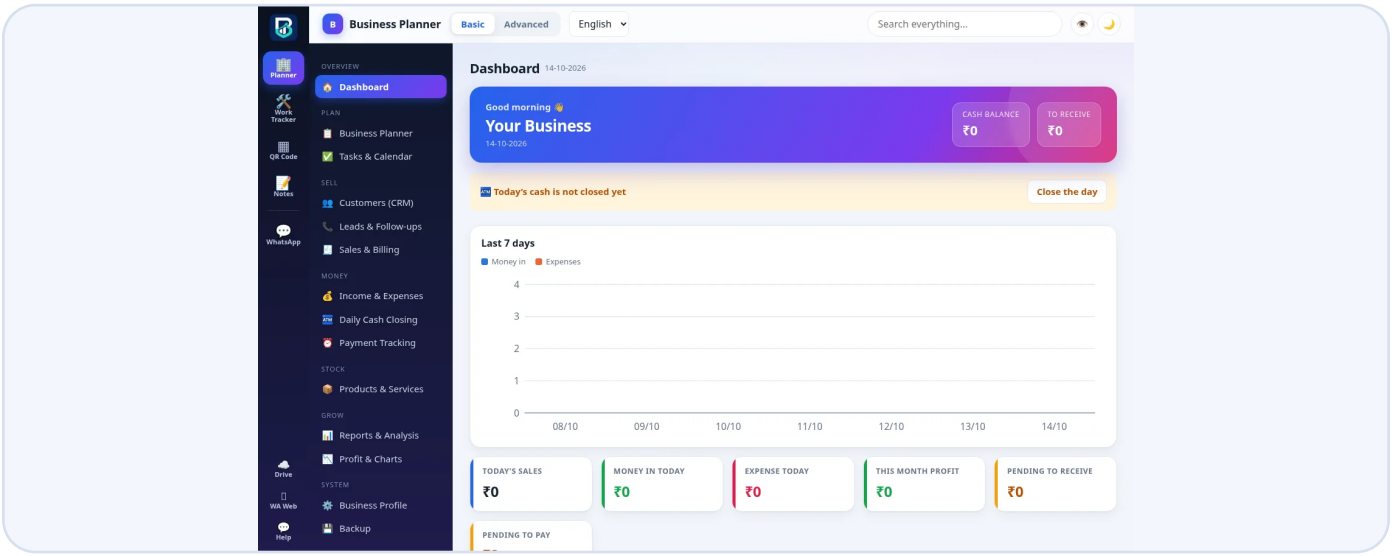

1. Enter the business name, contact details and address accurately.
2. Add tax or registration details used on quotations and bills where applicable.
3. Choose the default language and currency used in forms and reports.
4. Review the profile on a sample quotation before using it with customers.
5. Update details promptly when your phone, email or business address changes.

TIP

Consistent profile data builds trust across every exported document.

Currency and language

Display business values in the format your customers recognise.

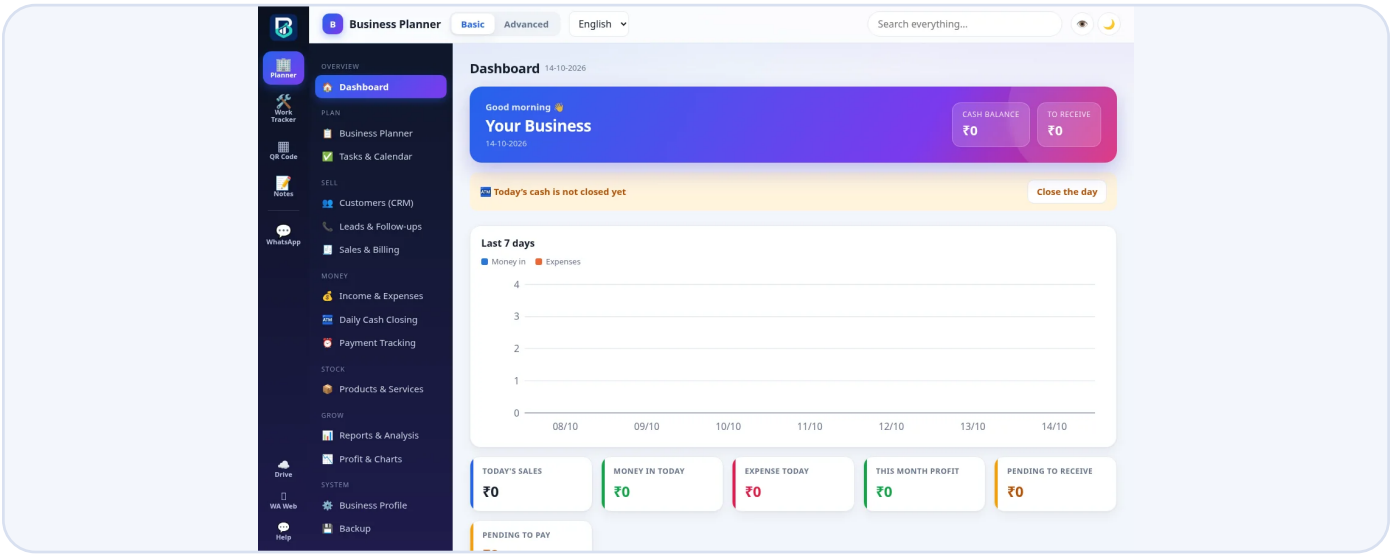

WHAT TO DO

1. Select the currency used for new records, labels, cash counts and reports.
2. Check symbols and denomination labels after changing currency.
3. Changing a currency label does not automatically convert existing amounts or exchange rates.
4. Choose a supported language for the interface and verify printed output.
5. For multi-country activity, keep separate records or convert amounts before entry.

CHECK

Record the exchange rate externally whenever you manually convert money.

Personalise the workspace while keeping access controlled.

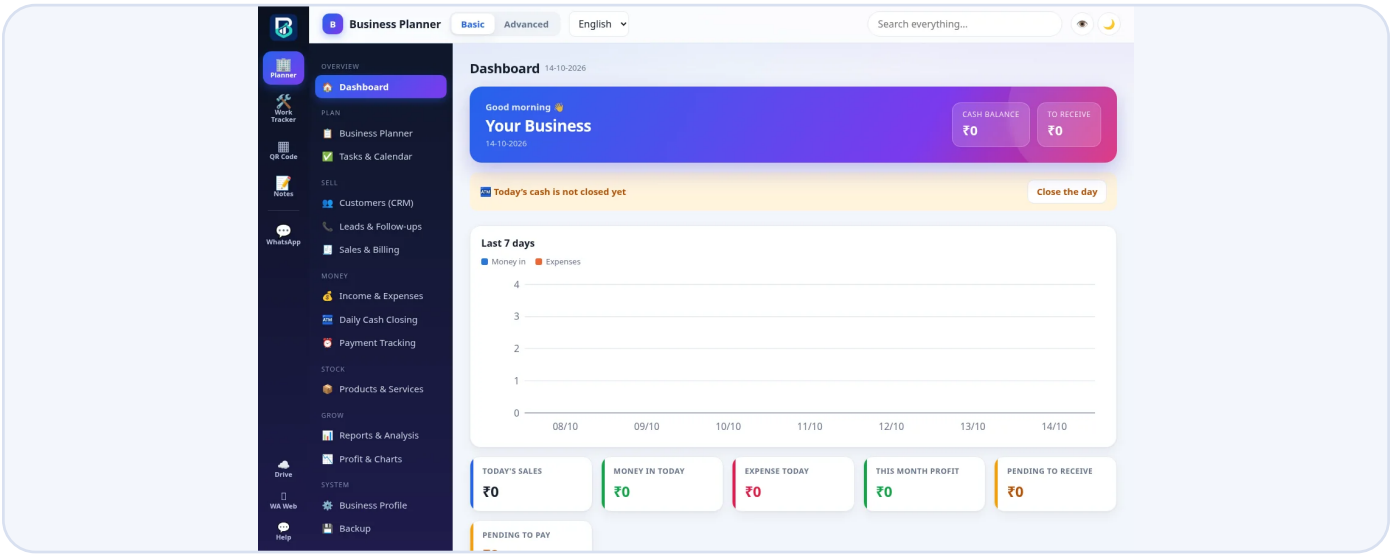

WHAT TO DO

1. Use Search everything to locate tools and saved records quickly.
2. Use the eye or visibility control to reduce sensitive figures shown on screen.
3. Switch theme for comfortable viewing in bright or low-light conditions.
4. Create a PIN where offered and store it securely.
5. A forgotten PIN may require the supported recovery process; a PIN is not a replacement for backups.

CHECK

Do not share a device PIN in WhatsApp groups or public notes.

Turn long-term goals into measurable outcomes.

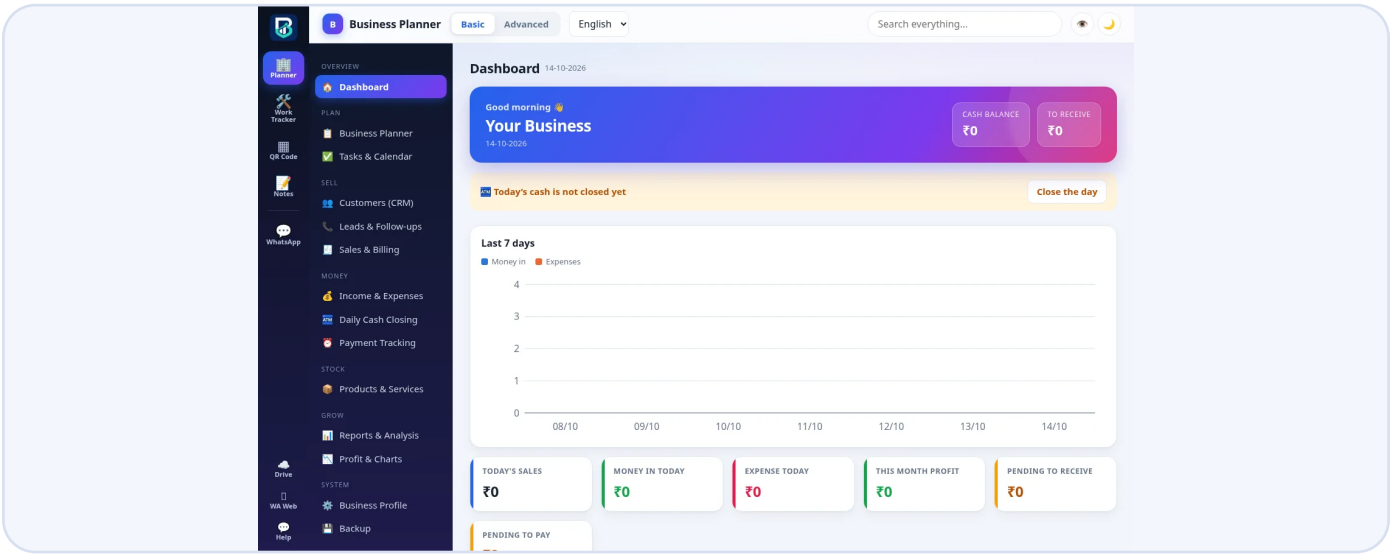

WHAT TO DO

1. Create a goal with a clear result, amount or deadline.
2. Break it into smaller milestones that can be reviewed weekly.
3. Update progress from real results rather than estimates.
4. Use notes to record blockers and the next action.
5. Review overdue targets during the daily or weekly business meeting.

TIP

A useful target has an owner, due date and measurable result.

Organise priorities, actions and decisions in one place.

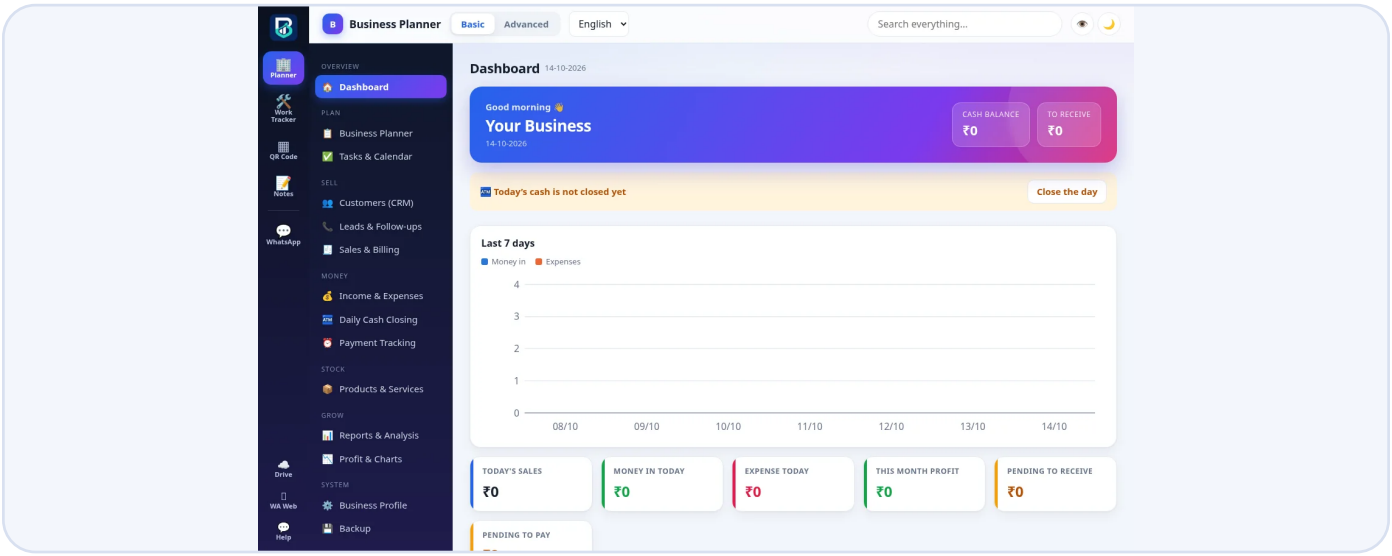

WHAT TO DO

1. Create a plan for the day, week, month or project.
2. Describe the expected result and the next physical action.
3. Link related customer, sales or task information where available.
4. Review incomplete items before adding more work.
5. Close or archive completed plans so the active list stays useful.

TIP

Keep plans short enough to review every day.

Give every commitment an owner and a date.

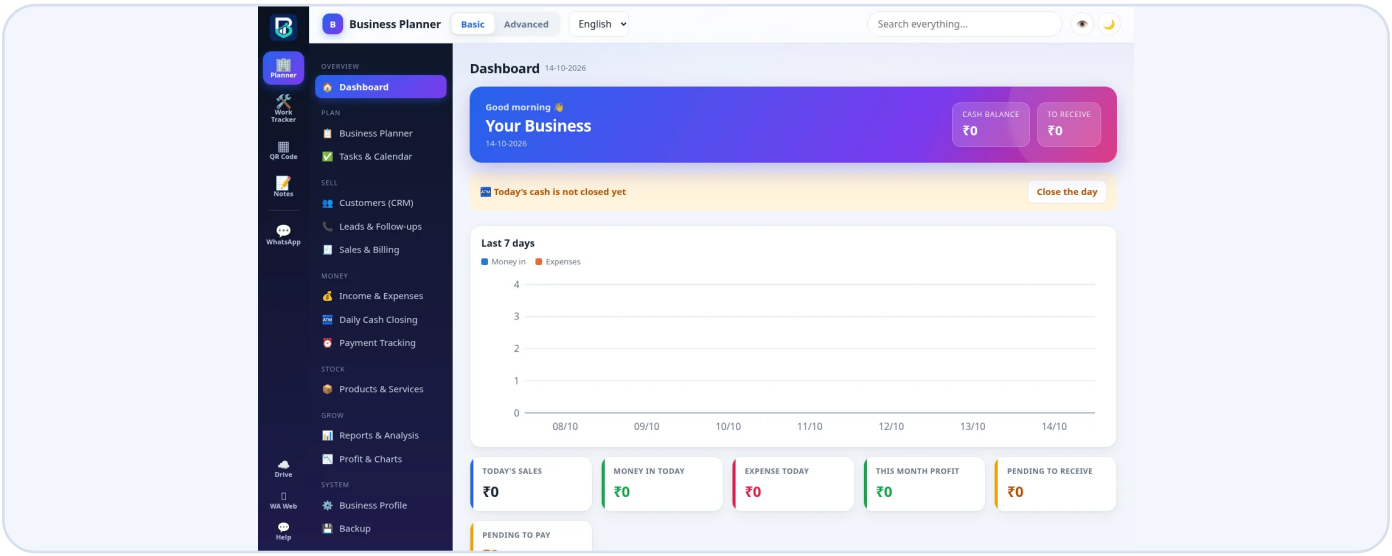

WHAT TO DO

1. Create a task with a specific title and due date.
2. Add priority, context and reminder information.
3. Check the calendar for workload conflicts before confirming dates.
4. Mark work complete as soon as it is finished.
5. Review overdue tasks daily and reschedule only with a clear reason.

TIP

Tasks without dates are easy to forget; use a realistic deadline.

Keep customer identity and history together.

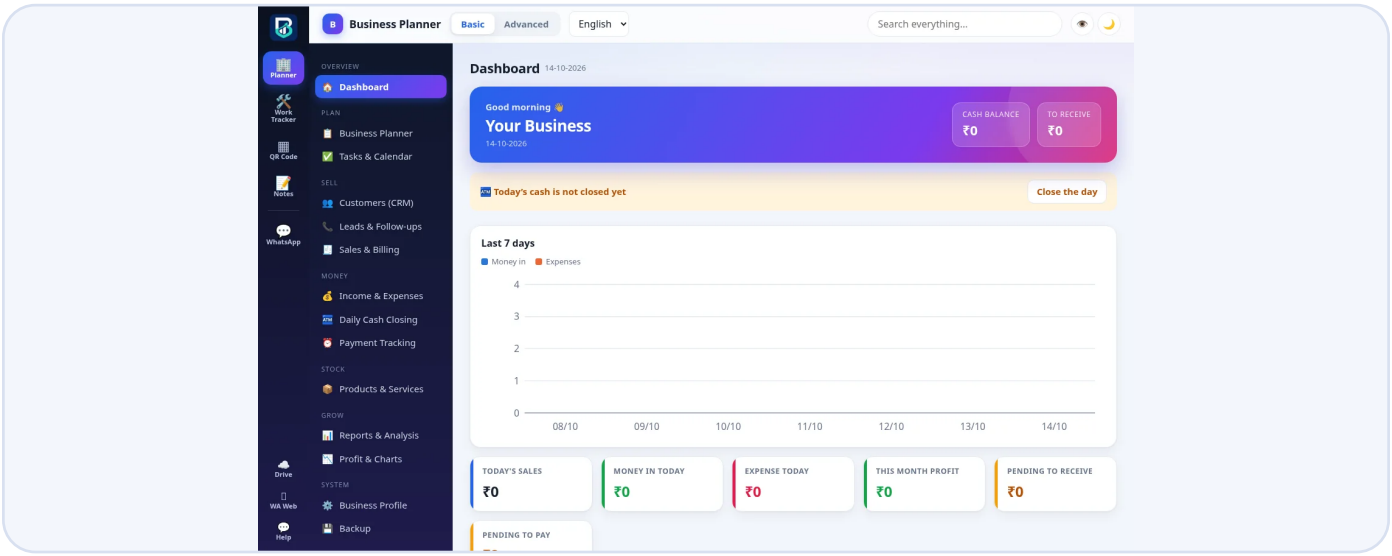

WHAT TO DO

1. Create one customer record and avoid duplicate spellings.
2. Add phone, email, address and business notes with permission.
3. Use the record when creating follow-ups, quotations, sales and payments.
4. Search before adding a new customer to prevent duplicates.
5. Update contact details and record important conversations.

TIP

Collect only information needed for the business relationship.

Move enquiries forward with a defined next step.

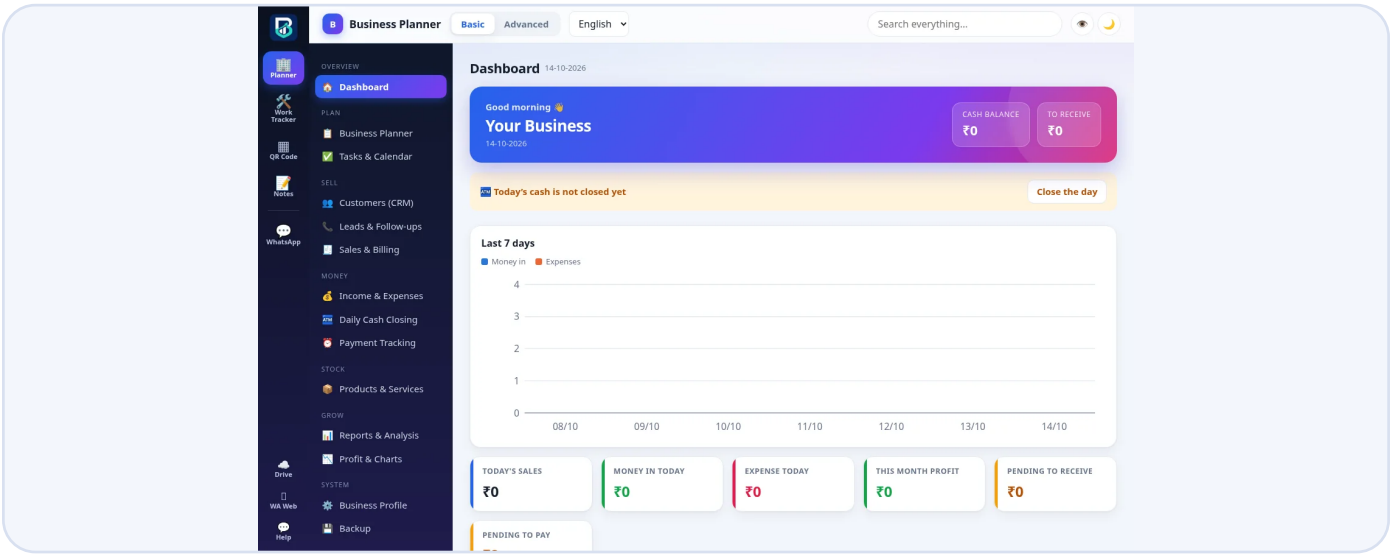

WHAT TO DO

1. Record the lead source and the customer's requirement.
2. Set the next follow-up date while the conversation is fresh.
3. Add an expected value or status when useful.
4. Prepare a WhatsApp message, quotation or appointment from the next action.
5. Close won or lost leads and record the reason for better analysis.

TIP

A lead is useful only when the next action is visible.

Create a clear offer before work begins.

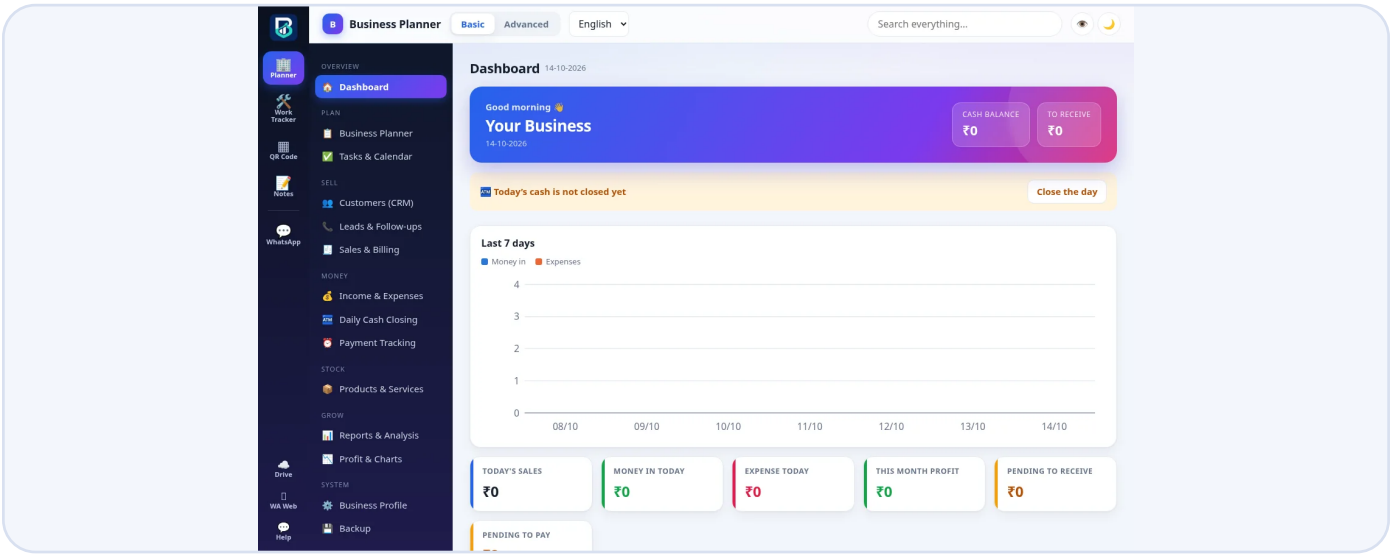

WHAT TO DO

1. Choose the customer and add products or services.
2. Enter quantity, rate, tax, discount and validity carefully.
3. Add scope, delivery and payment terms in plain language.
4. Preview the document and confirm totals before exporting PDF.
5. Record acceptance and convert the work into the next sales or service step.

TIP

Avoid editing a sent quotation without recording the revision.

Record completed sales so money and reports stay accurate.

WHAT TO DO

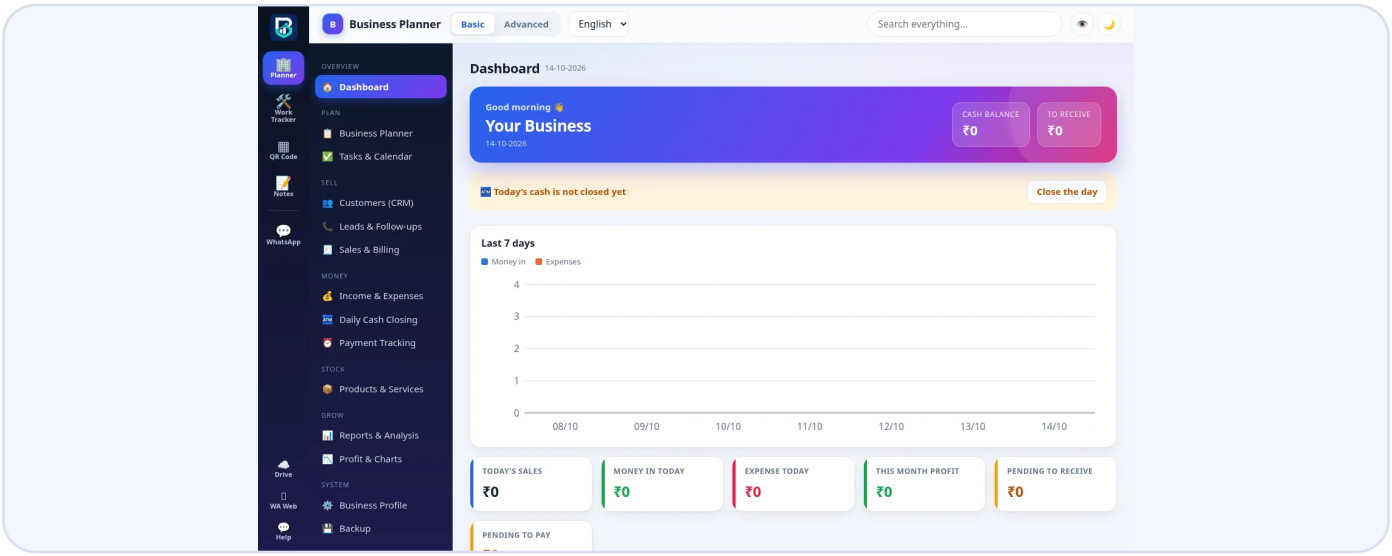

1. Select the correct customer or create a walk-in sale according to policy.
2. Add line items, quantities, discounts and applicable taxes.
3. Choose the correct payment status and method.
4. Export or share the final customer document.
5. Review the transaction in payment and report sections.

TIP

Do not mark a sale paid until the money is confirmed.

Payment tracking

Know what is paid, due and overdue.

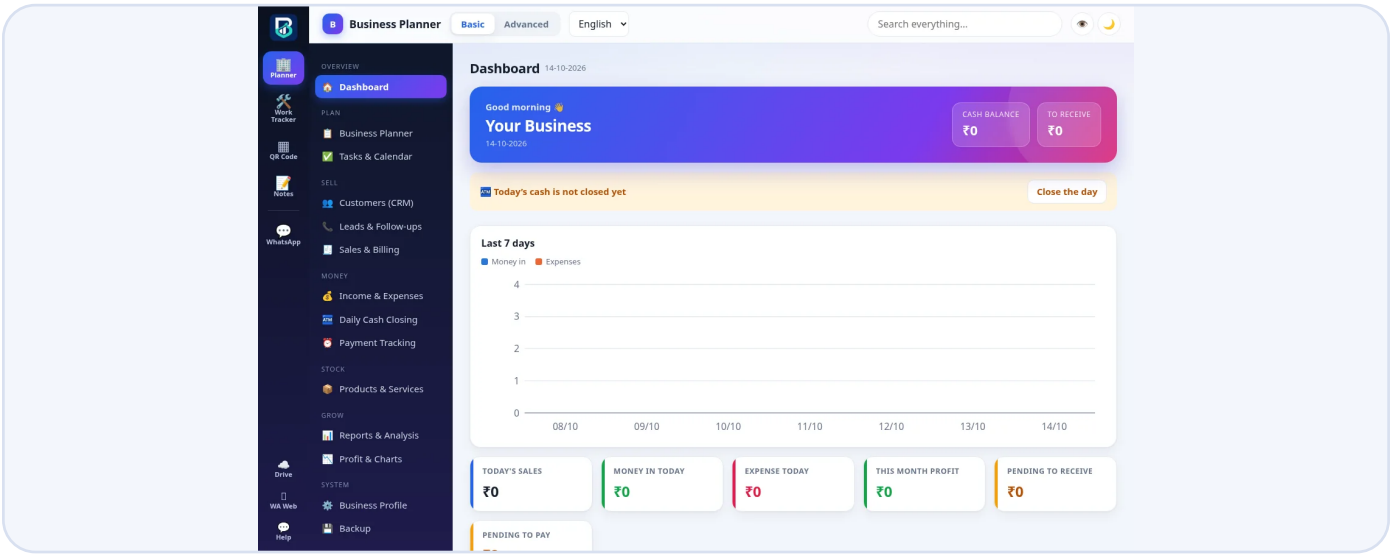

WHAT TO DO

1. Record every payment against the correct customer and transaction.
2. Enter date, amount, method and reference number.
3. Use partial-payment status when a balance remains.
4. Follow up overdue amounts with a prepared message and verified statement.
5. Reconcile the list with bank or cash records regularly.

TIP

Correct payment references make disputes much easier to resolve.

Capture cash movement before receipts and details are forgotten.

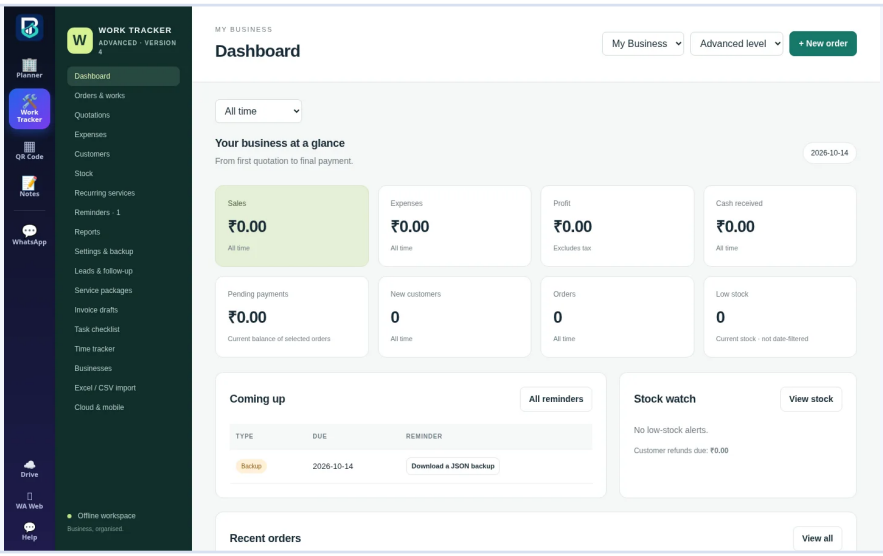

WHAT TO DO

1. Classify income and expenses consistently.
2. Enter the transaction date, amount, party and purpose.
3. Attach or reference supporting evidence where the module allows.
4. Separate business and personal spending.
5. Review category totals before finalising a period report.

TIP

Regular entry produces more reliable profit reports than month-end memory.

Compare expected cash with the amount physically counted.

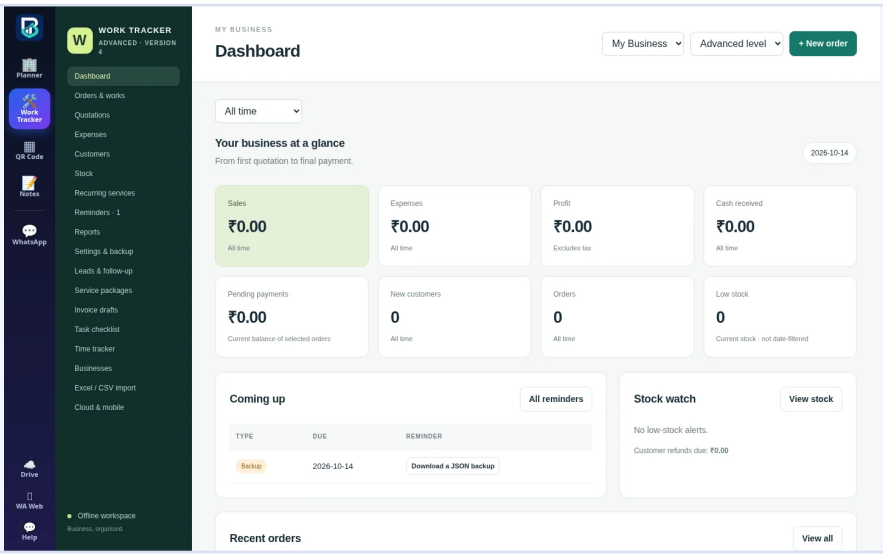

WHAT TO DO

1. Enter the opening cash for the day.
2. Count notes and coins using the denominations for the selected currency.
3. Compare the counted total with money in and recorded expenses.
4. Record the reason for any difference before closing.
5. Save the closing result and review repeated variances.

CHECK

Changing currency labels does not convert the monetary values already entered.

Use a consistent catalogue for faster quotations and sales.

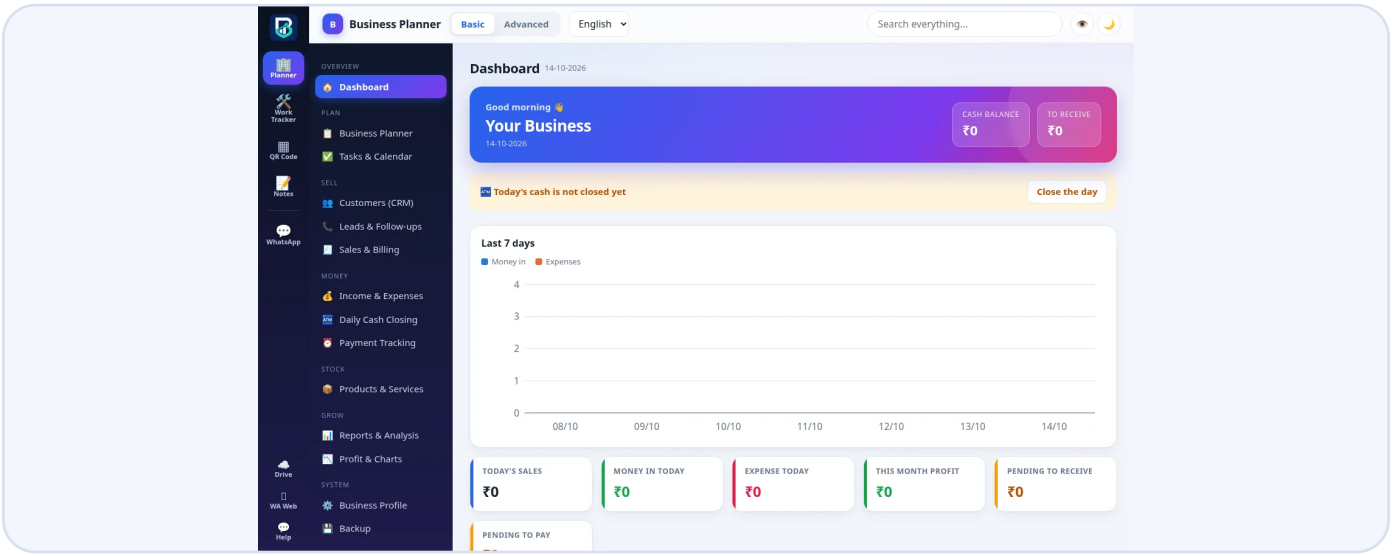

WHAT TO DO

1. Create a clear name, code and description.
2. Set the normal selling price and applicable tax or unit information.
3. For products, maintain stock-related details; for services, define scope and duration.
4. Update prices through a controlled review.
5. Avoid duplicate catalogue items with slightly different names.

TIP

A clean catalogue improves document quality and reporting.

Record movement so available quantity stays meaningful.

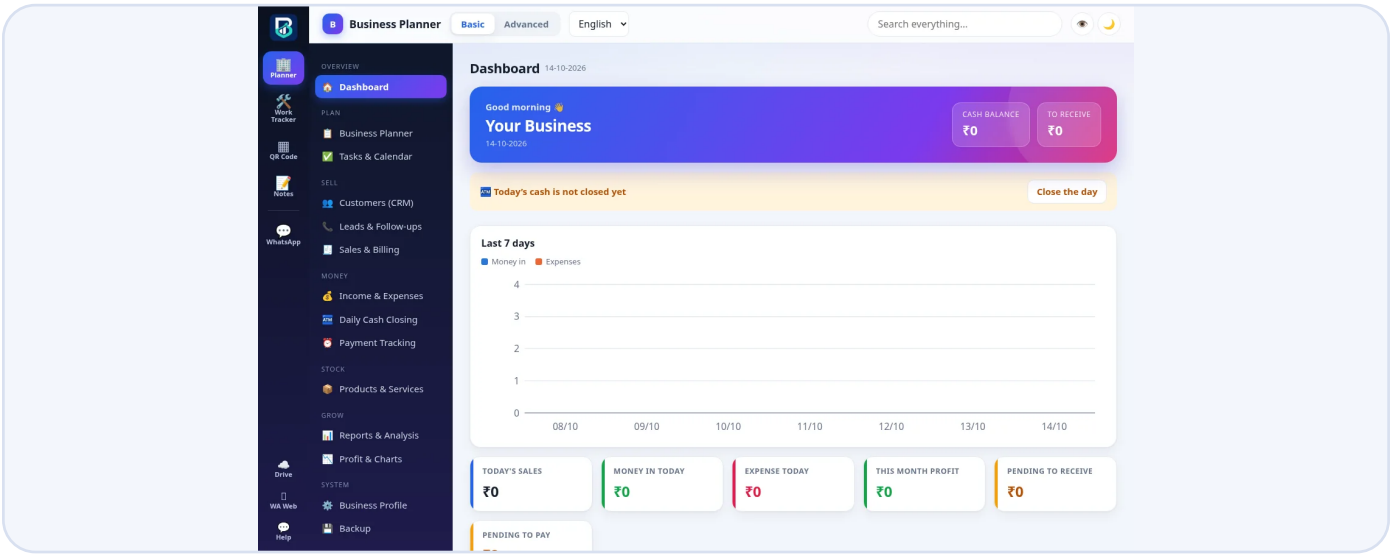

WHAT TO DO

1. Enter opening stock carefully and keep a dated source record.
2. Record purchases when goods are received.
3. Reduce stock through recorded sales or approved adjustments.
4. Investigate negative or unexpected quantities.
5. Perform a physical stock count and reconcile differences regularly.

TIP

Back up before bulk stock corrections.

Keep supplier and purchase history easy to review.

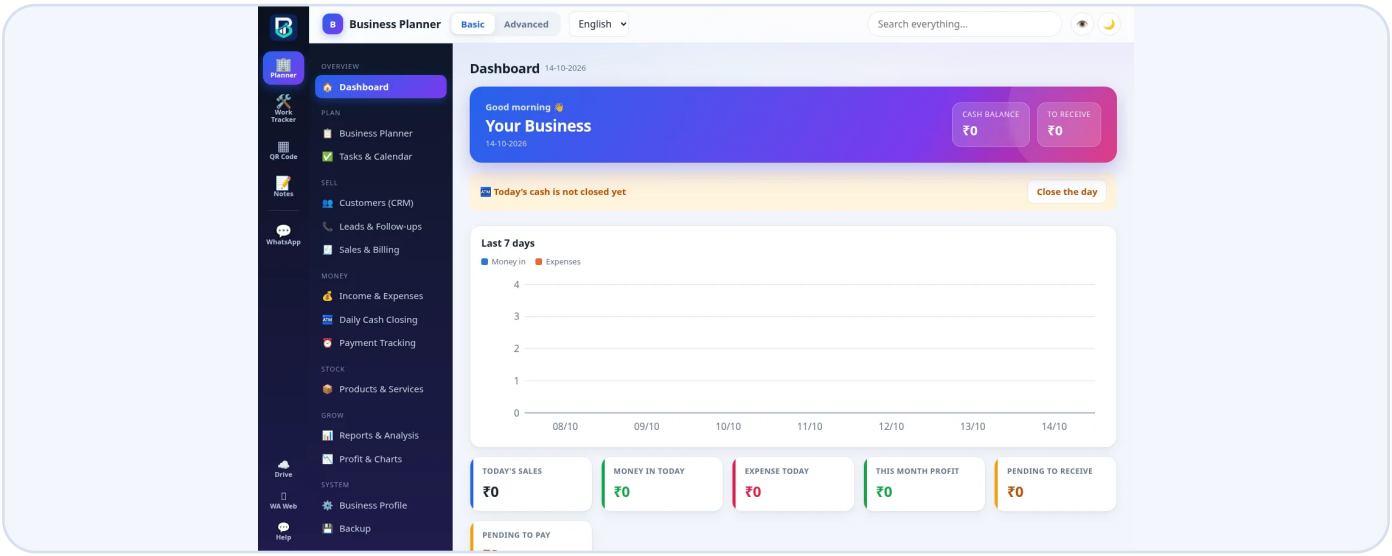

WHAT TO DO

1. Create one supplier profile with verified contact details.
2. Record the products, quantities, purchase value and date.
3. Track amounts due and payment references consistently.
4. Use notes for delivery terms, returns and important discussions.
5. Review supplier performance before major repeat orders.

TIP

Keep customer and supplier records separate even when the same person serves both roles.

Compare planned spending with actual business activity.

WHAT TO DO

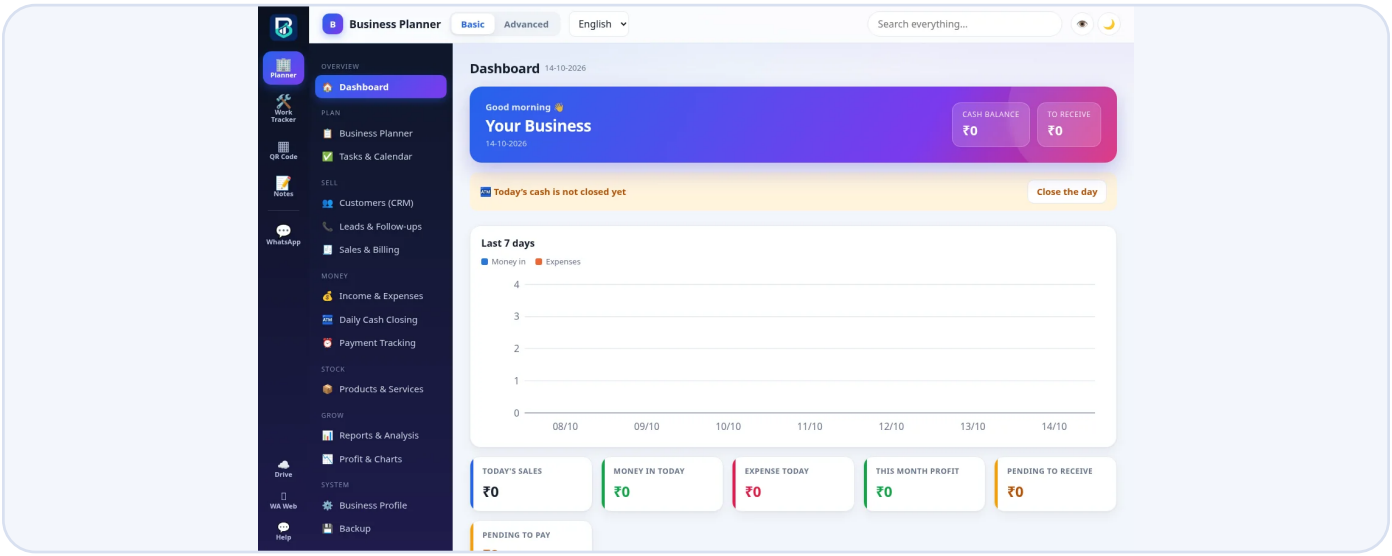

1. Set a realistic amount for each period and category.
2. Base the budget on known commitments and expected income.
3. Review actual income and expenses against the plan.
4. Investigate large differences and update future assumptions.
5. Do not overwrite historical budgets simply to match actual results.

TIP

A budget supports decisions; it is not a guarantee of income.

Repeating items and renewals

Prevent recurring work and payments from being missed.

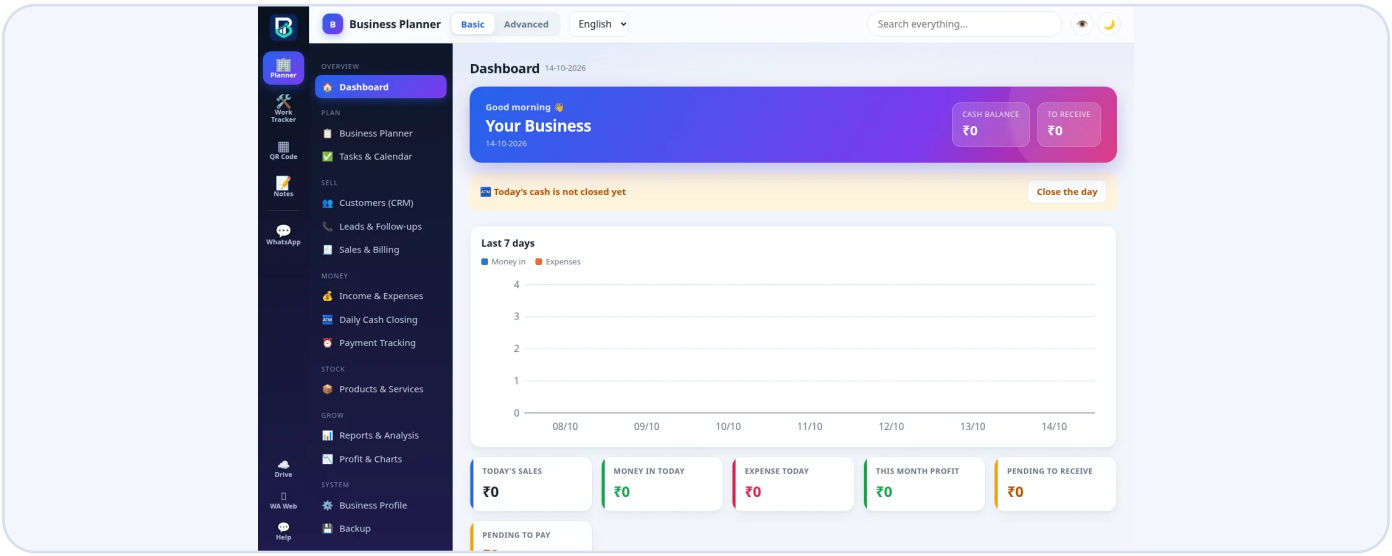

WHAT TO DO

1. Create the item with a clear frequency and next due date.
2. Add the responsible person and supporting notes.
3. Review upcoming renewals before the due date.
4. Complete or roll forward only after the real action occurs.
5. Remove obsolete items so reminders remain trusted.

TIP

Examples include subscriptions, rent, service renewals and routine follow-ups.

Coordinate scheduled work and team presence.

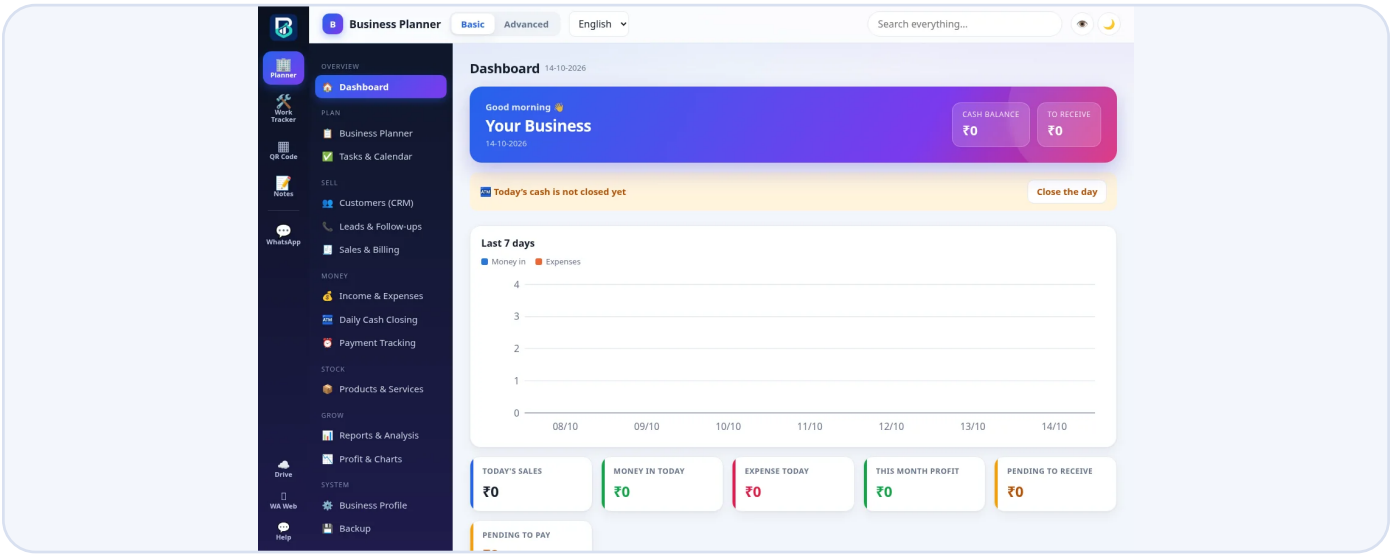

WHAT TO DO

1. Create appointments with customer, place, date and purpose.
2. Keep staff names and responsibilities accurate.
3. Record attendance according to your organisation's policy.
4. Check schedules before assigning new work.
5. Protect staff information and allow access only to authorised users.

TIP

Use only the fields your business genuinely needs.

Turn daily records into decisions.

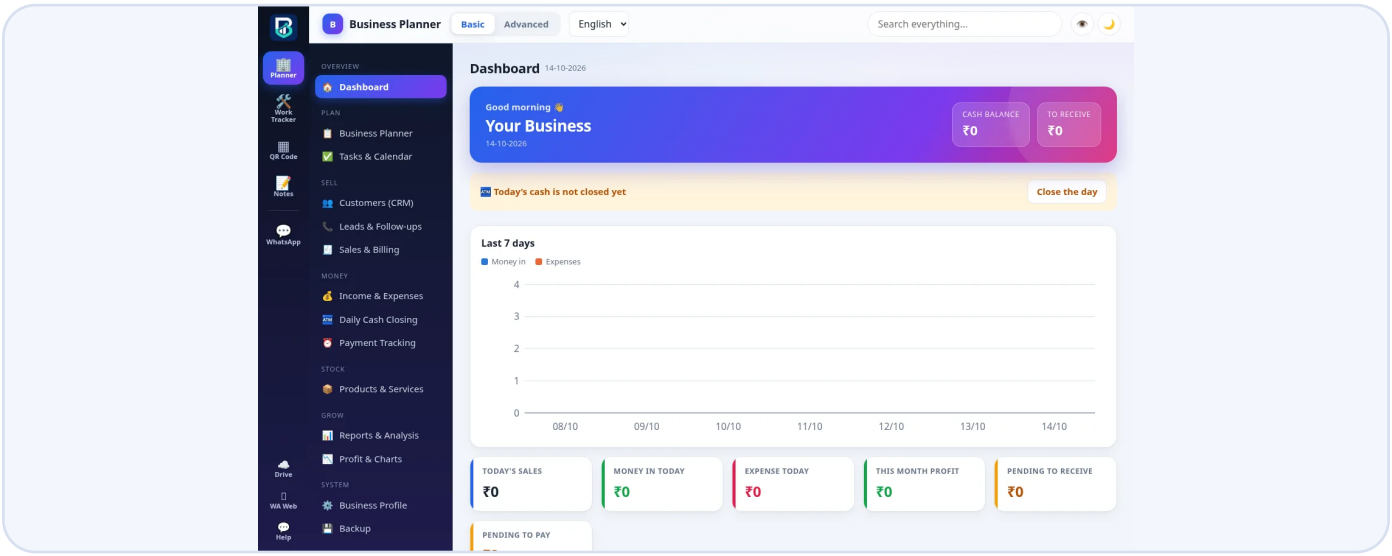

WHAT TO DO

1. Select the correct date range and filters.
2. Confirm source transactions before trusting a total.
3. Compare periods with the same basis and currency.
4. Export PDF for reading or CSV for deeper spreadsheet analysis.
5. Use reports to find trends, overdue work and unusual values.

TIP

A report reflects the records entered; missing entries produce incomplete conclusions.

Read trends without losing the detail behind them.

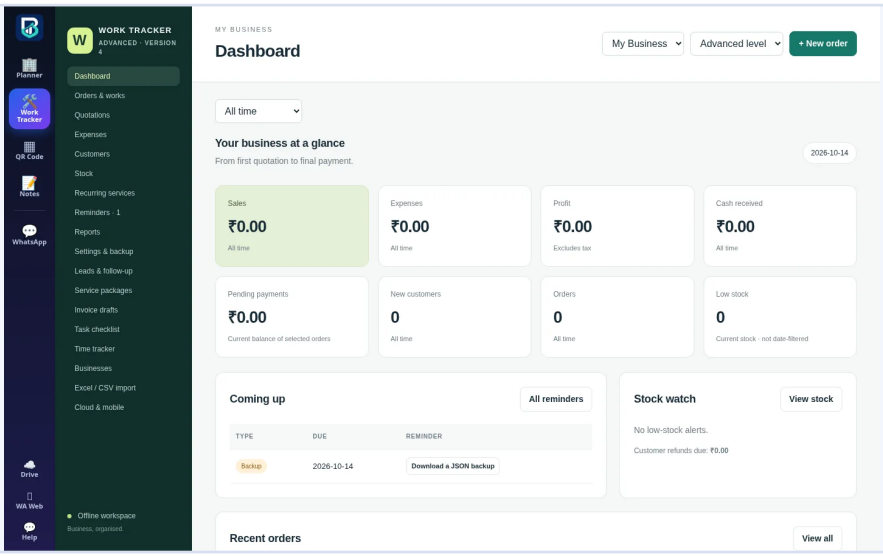

WHAT TO DO

1. Review revenue, direct costs and operating expenses separately.
2. Check the period and currency displayed on every chart.
3. Open the underlying records when a value looks unusual.
4. Compare like-for-like periods instead of isolated totals.
5. Use the result to choose one specific action and review it later.

TIP

Charts support judgement; reconcile important figures before formal use.

Track active customer work from request to completion.

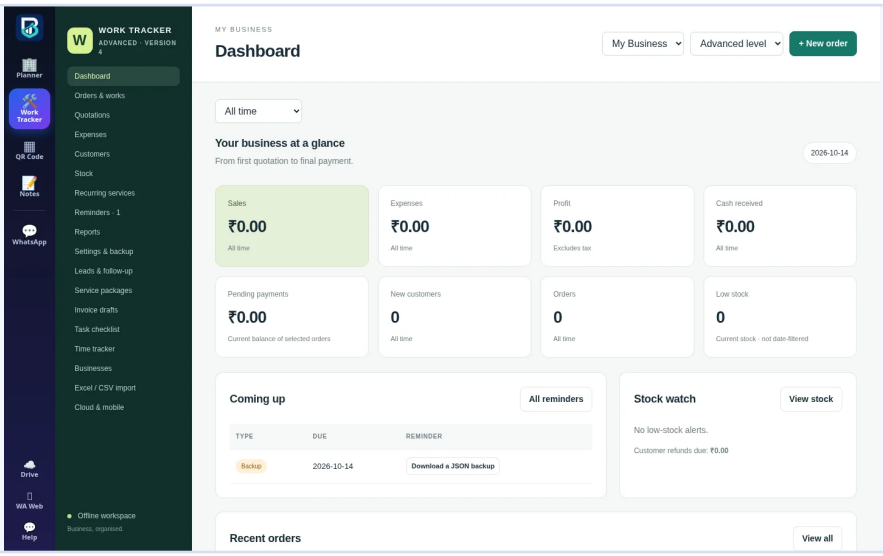

WHAT TO DO

1. Use the Work Tracker navigation for operational records.
2. Review open work, due dates, services, orders and reminders.
3. Keep customer and payment information connected to the correct job.
4. Close completed work and record the final outcome.
5. Use reports to identify delays and repeated service issues.

TIP

Update status during the workday so the dashboard remains current.

Set defaults before the team begins entering jobs.

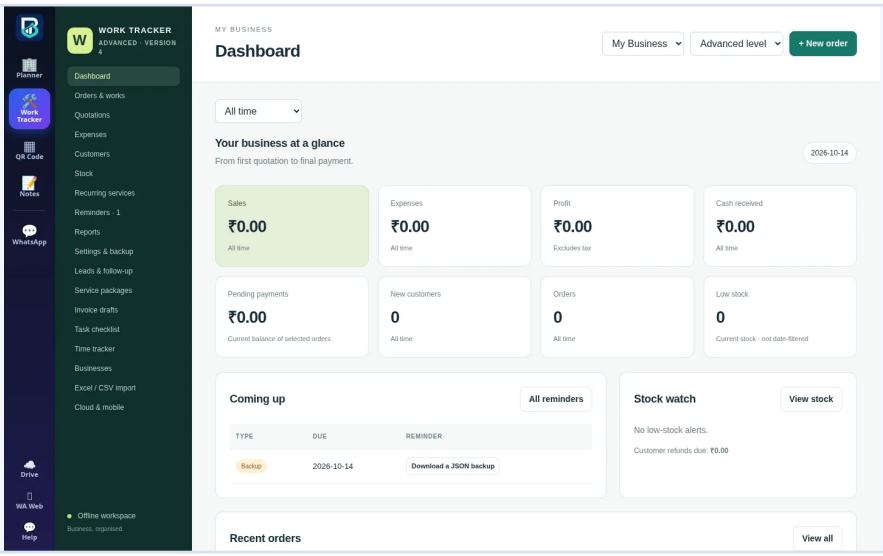

WHAT TO DO

1. Confirm business identity, currency and document settings.
2. Create standard products, services and statuses.
3. Agree how the team will name customers, jobs and references.
4. Set appropriate reminders and notification behaviour.
5. Create a test job, payment and report before live use.

TIP

Document your naming rules to prevent duplicate records.

Reuse accurate master data across daily work.

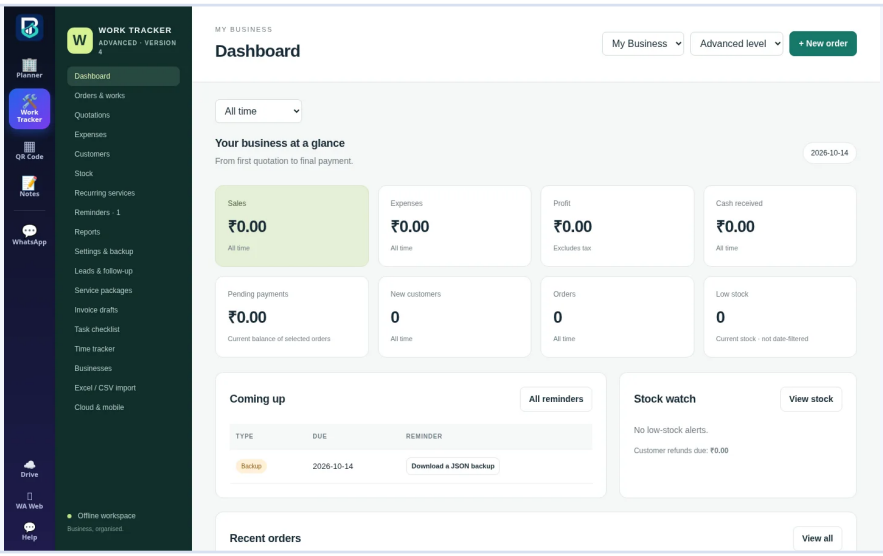

WHAT TO DO

1. Search for an existing customer before creating one.
2. Keep phone, address and service notes current.
3. Select standard products or services instead of retyping descriptions.
4. Review price and quantity before saving an order.
5. Correct master data carefully because it affects future entries.

TIP

Back up before a major catalogue cleanup.

Connect the promise made to the work delivered.

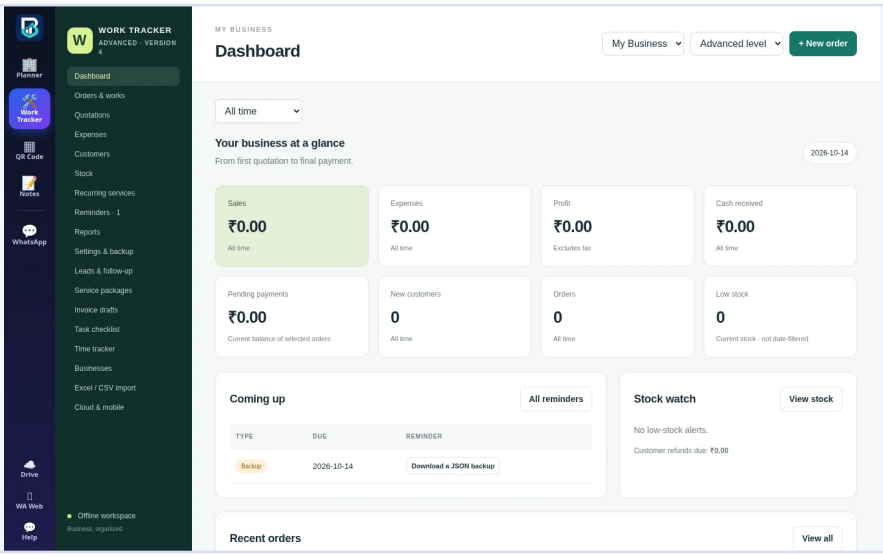

WHAT TO DO

1. Begin with a customer requirement and prepare a clear quotation.
2. Confirm scope, quantity, price and expected date.
3. When accepted, create or update the operational order.
4. Track status and record changes agreed with the customer.
5. Complete the order only after delivery and payment details are reviewed.

TIP

Use notes to preserve a trace of approved changes.

Record adjustments so balances remain explainable.

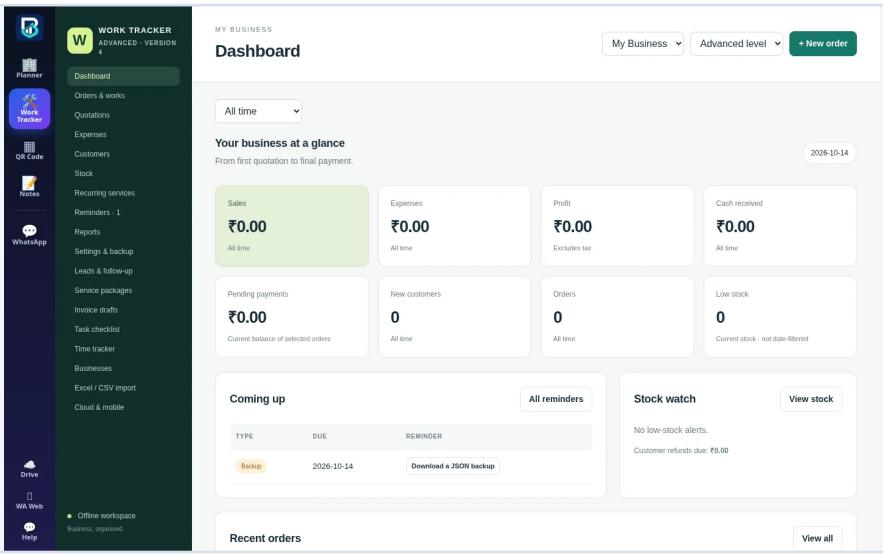

WHAT TO DO

1. Attach payments to the correct customer and order.
2. Record returns with item, quantity, reason and date.
3. Record refunds separately with method and reference.
4. Capture work-related expenses in the proper category.
5. Review the customer balance and reports after every adjustment.

TIP

Never delete a valid transaction simply to make a balance look correct.

Keep evidence and follow-up close to the work record.

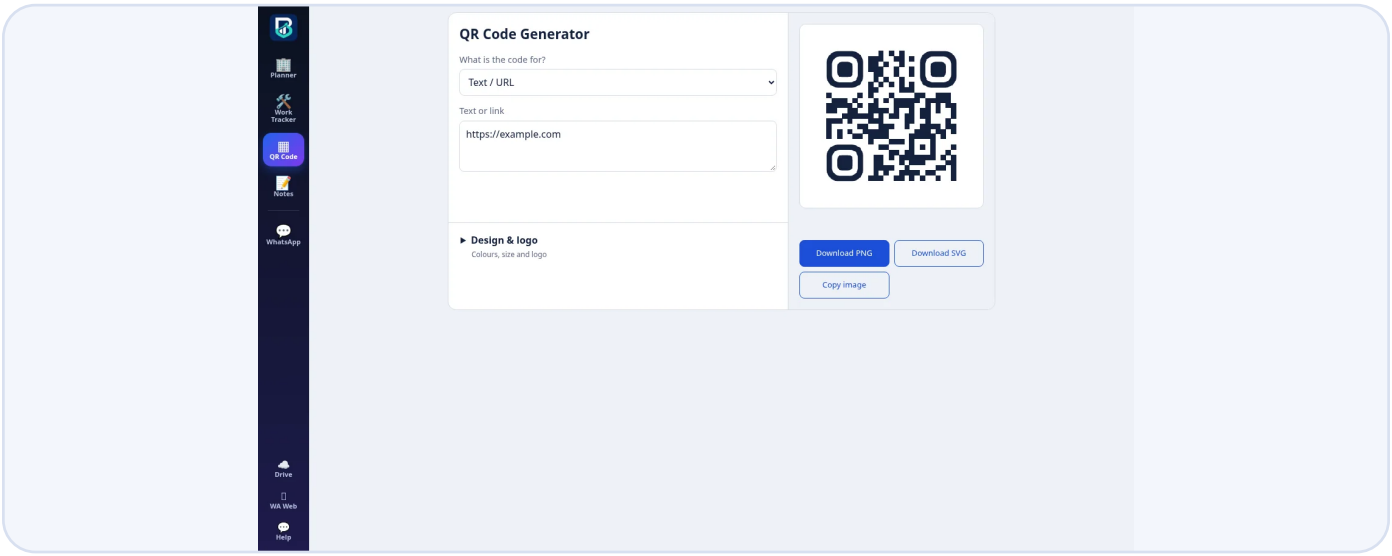

WHAT TO DO

1. Create reminders for promised calls, visits and service dates.
2. Describe service work and the result clearly.
3. Add supported files only when relevant to the job.
4. Use common formats such as PDF, PNG, JPEG, WebP or text where accepted.
5. Avoid unnecessary personal or confidential files and keep a separate backup.

TIP

Large attachments increase storage and backup size.

Create a QR code for a verified business destination.

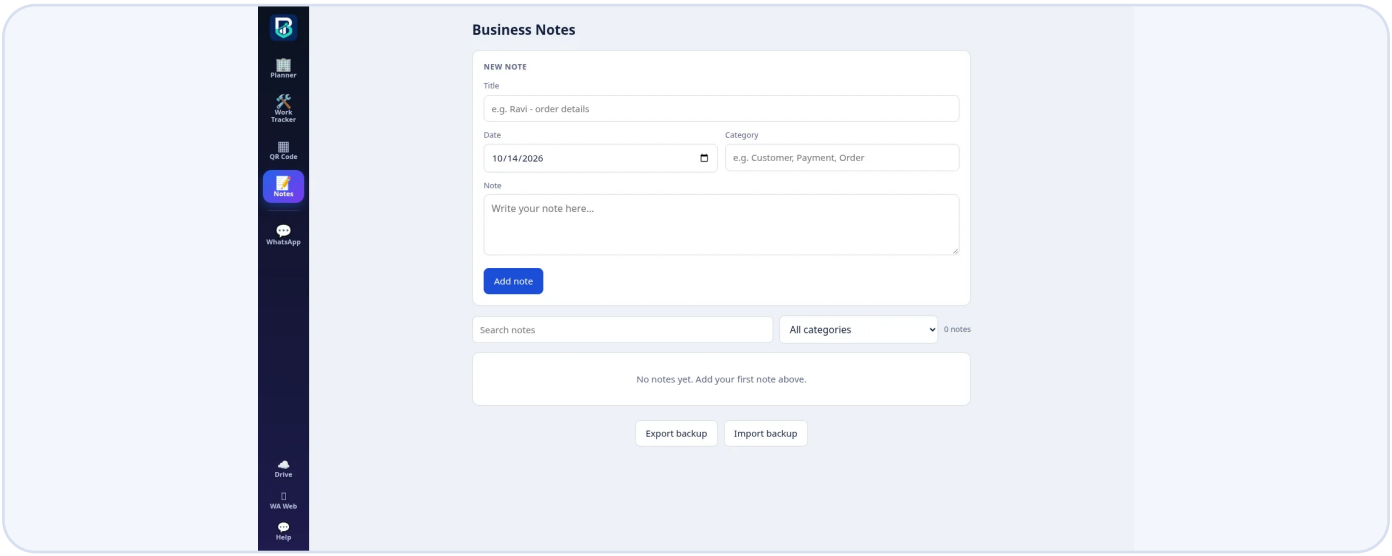

WHAT TO DO

1. Choose the QR type and enter the exact text, URL or contact value.
2. Preview and test the code with another phone.
3. Check that the destination is secure and current.
4. Download the QR image for approved print or digital use.
5. Retest the code after changing a linked page or contact detail.

TIP

Never assume a QR code works simply because it looks correct.

Store working notes in an organised, searchable place.

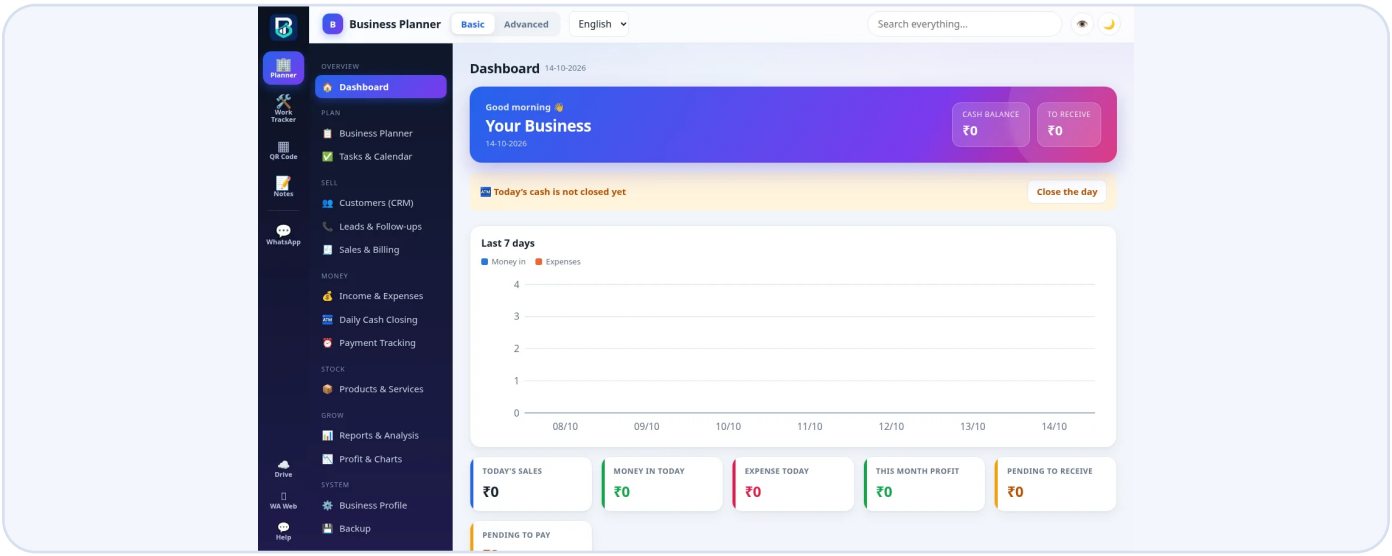

WHAT TO DO

1. Use a descriptive title and keep one subject per note.
2. Add decisions, call details or checklists that support business work.
3. Search before creating another note on the same subject.
4. Do not store passwords, recovery codes or full payment-card details.
5. Back up notes with the rest of the Business Suite data.

TIP

Turn action items in notes into dated tasks.

Prepare a clear message from verified business information.

WHAT TO DO

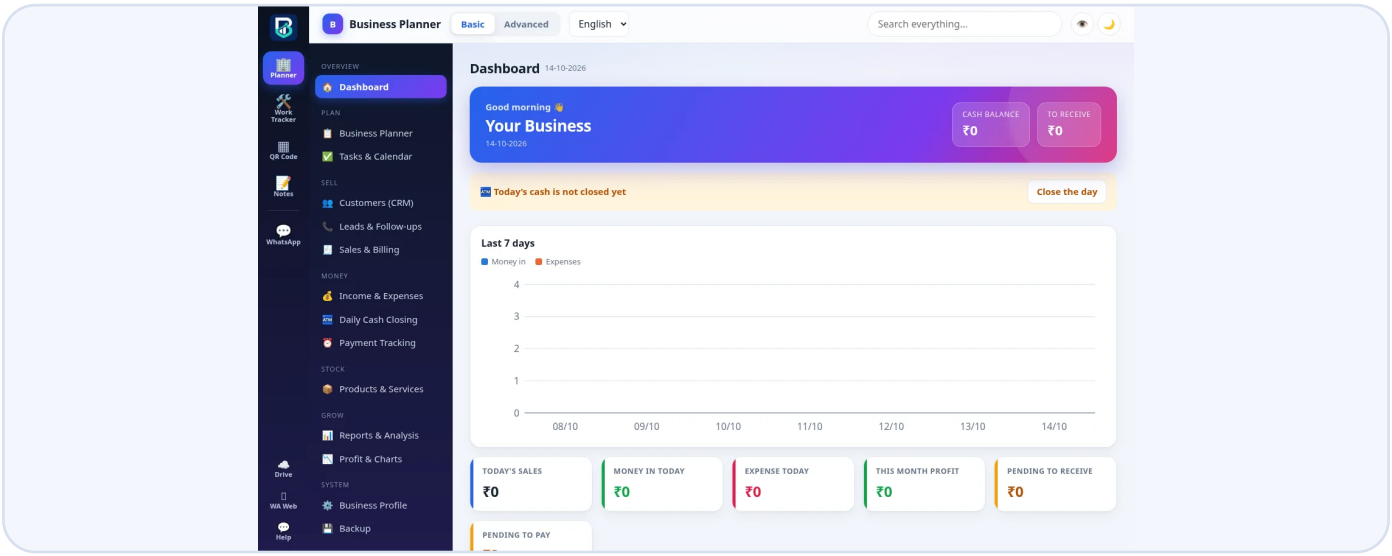

1. Choose the customer and confirm the phone number.
2. Review the prepared message, amount, date and reference.
3. Open WhatsApp and check the recipient again.
4. Press Send yourself after the final review.
5. Record the follow-up result in Business Suite when appropriate.

CHECK

Business Suite prepares content; the user confirms and sends it in WhatsApp.

Daily WhatsApp summary

Prepare a compact end-of-day view for review or sharing.

WHAT TO DO

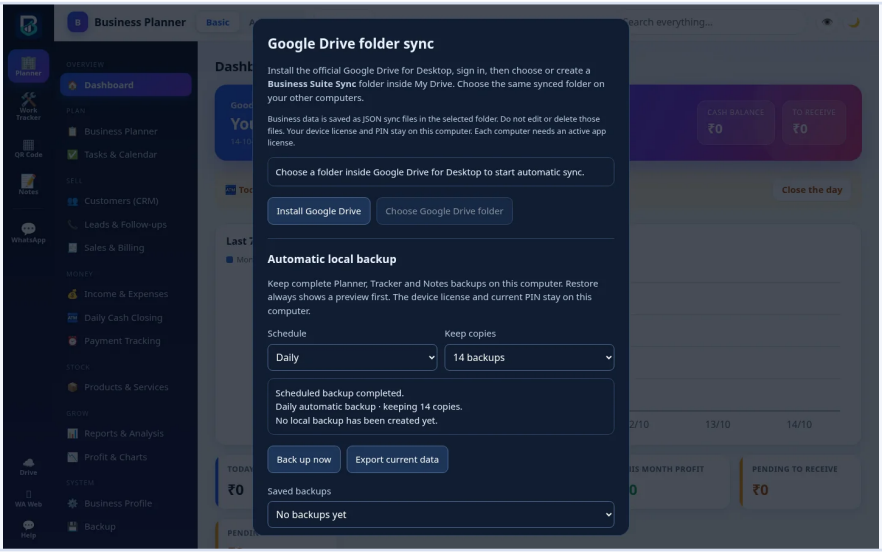

1. Choose the intended summary time and included information.
2. Keep Business Suite available according to the device's scheduling limits.
3. Review the prepared totals and text.
4. Open WhatsApp, select the intended recipient and press Send.
5. If values are missing, correct the underlying records and prepare the summary again.

CHECK

Automatic preparation does not remove the user's responsibility to verify and send.

Connect your Google Drive

Connect the Google account that should own the business backup folder.

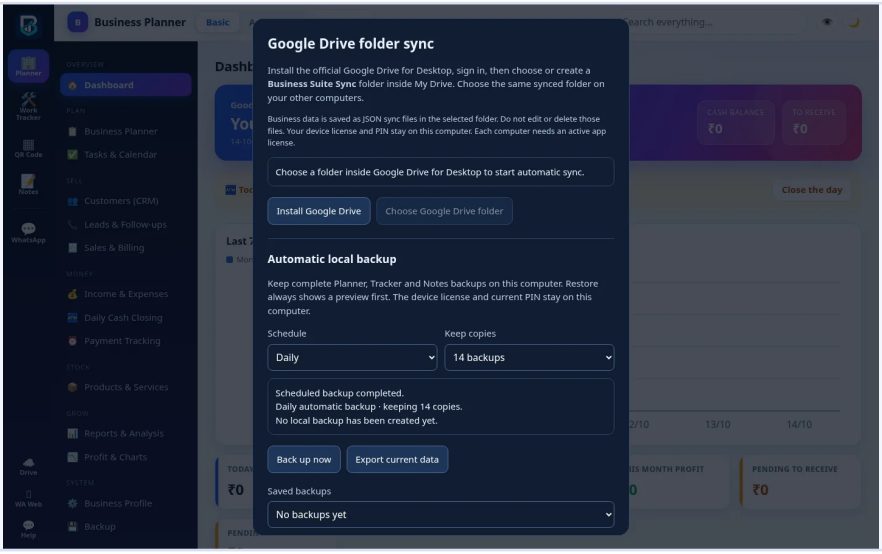

WHAT TO DO

1. Open Drive in Business Suite and select Connect Google Drive.
2. Choose the correct Google account and review the permission request.
3. Approve access used by Business Suite for files it creates or opens.
4. Wait for the connection and initial sync status.
5. Open Google Drive and confirm that a Business Suite folder is visible.

TIP

Google Drive is optional; internet is required for connection and sync.

Use one authorised Drive account to move current data between your devices.

WHAT TO DO

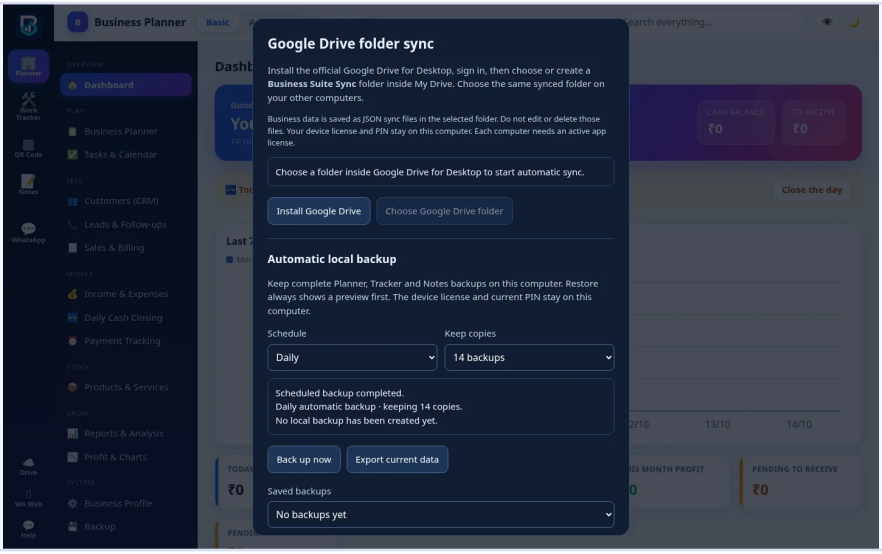

1. Business Suite creates and uses its own visible Business Suite folder.
2. Connect the same intended Google account on each supported device.
3. Allow one device to finish syncing before editing the same data elsewhere.
4. Check sync status and the latest update time before switching devices.
5. Each device must meet the applicable licence requirements.

TIP

Avoid simultaneous conflicting edits on different offline devices.

Backup, encrypted backup and restore

Keep recoverable copies before updates, resets and major edits.

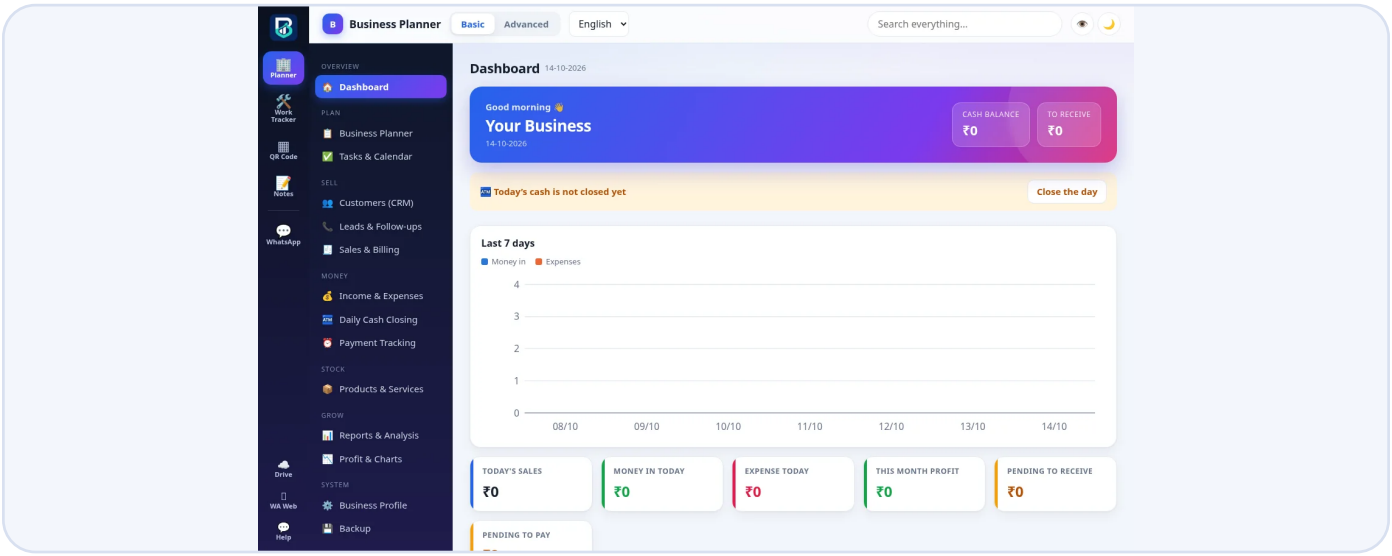

WHAT TO DO

1. Download a JSON backup for a portable copy of your records.
2. Use the password-protected encrypted backup option when appropriate; store its password safely.
3. During restore, preview the file and record counts before applying it.
4. Use Add to current for a safer merge; duplicate records are skipped where supported.
5. Use Replace or Start Fresh only with a verified backup and a clear reason.

CHECK

Test restoration with a known backup before relying on the process.

Choose the file type that matches the job.

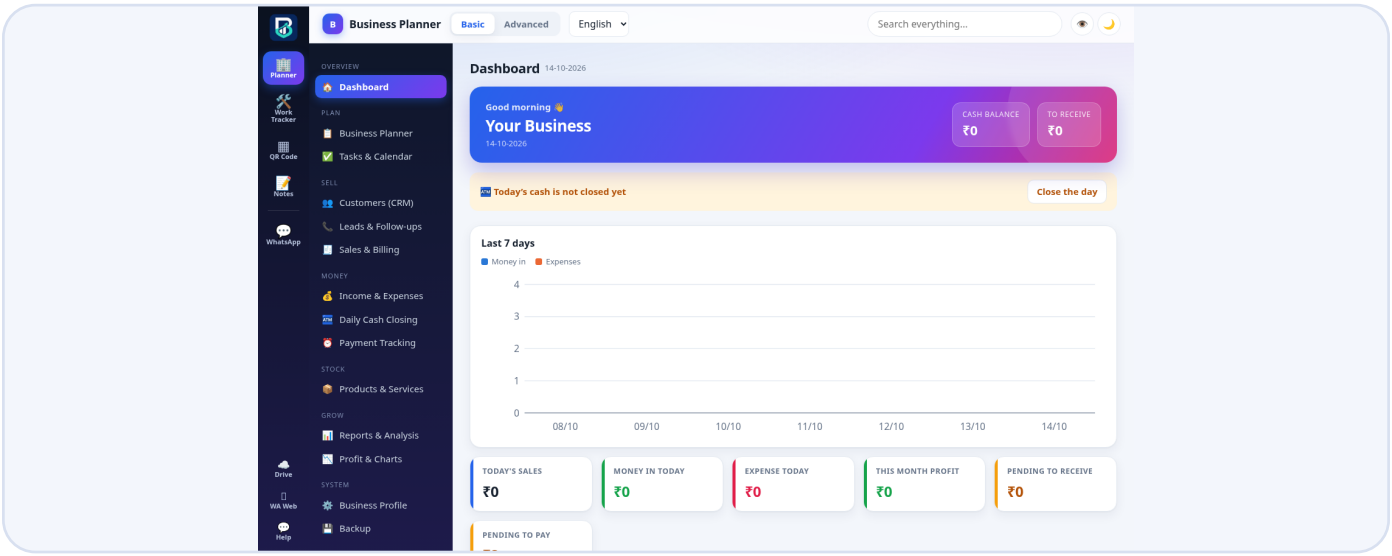

WHAT TO DO

1. PDF is best for readable, printable customer and management documents.
2. CSV is best for Excel, Google Sheets or accountant analysis.
3. JSON is intended for complete Business Suite backup and restore.
4. Wait for the success message before starting another download.
5. Find files in Downloads, rename them clearly and move copies to approved storage.

CHECK

If download remains stuck, close the dialog, retry once and follow page 50.

Complete these checks before depending on Business Suite for daily work.

WHAT TO DO

1. Blank page: reopen the app, update Android System WebView/Chrome where applicable, then restart the device.
2. Download stuck: wait for completion, close the dialog, check Downloads and retry after restarting the app.
3. Drive sign-in error: use the official Store/app build, correct account and stable internet; contact support with the exact error.
4. Before support: record device, app version, action, time and screenshot—never send passwords or recovery codes.
5. Final check: licence active, profile correct, sample record created, PDF/CSV tested, Drive status checked and a restorable backup stored.

CHECK

Support: https://keralawebsitedesign.com • Keep this guide with your authorised installer.
